Advanced Calculus

An authorised release of the long out of print classic textbook, *Advanced Calculus* by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revised text hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention *Differential and Integral Calculus* by R. Courant, *Calculus* by T. Apostol, *Calculus* by M. Spivak, and *Pure Mathematics* by G. Hardy. The reader should also have some experience with partial derivatives. Its overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

Mathematics for Machine Learning

Distills key concepts from linear algebra, geometry, matrices, calculus, optimization, probability and statistics that are used in machine learning.

New General Mathematics for Junior Secondary Schools

This well-established series, the most popular in Nigeria, has been fully revised to reflect recent developments in mathematics education at junior secondary level and the views of the many users of the books. It has especially been revised to fully cover the requirements of the new NERDC Universal Basic Education Curriculum.

Partial Differential Equations

Our understanding of the fundamental processes of the natural world is based to a large extent on partial differential equations (PDEs). The second edition of *Partial Differential Equations* provides an introduction to the basic properties of PDEs and the ideas and techniques that have proven useful in analyzing them. It provides the student a broad perspective on the subject, illustrates the incredibly rich variety of phenomena encompassed by it, and imparts a working knowledge of the most important techniques of analysis of the solutions of the equations. In this book mathematical jargon is minimized. Our focus is on the three most classical PDEs: the wave, heat and Laplace equations. Advanced concepts are introduced frequently but with the least possible technicalities. The book is flexibly designed for juniors, seniors or beginning graduate students in science, engineering or mathematics.

Groups, Combinatorics & Geometry A. A. Ivanov, Martin W. Liebeck, Jan Saxl, 2003 This book contains the proceedings of the L M S Durham Symposium on Groups Geometry and Combinatorics July 16 26 2001 P v Geometry and its Applications Vladimir Rovenski, Paweł Walczak, 2014-05-05 This volume has been divided into two parts Geometry and Applications The geometry portion of the book relates primarily to geometric flows laminations integral formulae geometry of vector fields on Lie groups and osculation the articles in the applications portion concern some particular problems of the theory of dynamical systems including mathematical problems of liquid flows and a study of cycles for non dynamical systems This Work is based on the second international workshop entitled Geometry and Symbolic Computations held on May 15 18 2013 at the University of Haifa and is dedicated to modeling using symbolic calculations in differential geometry and its applications in fields such as computer science tomography and mechanics It is intended to create a forum for students and researchers in pure and applied geometry to promote discussion of modern state of the art in geometric modeling using symbolic programs such as MapleTM and Mathematica as well as presentation of new results **Algebraic Geometry** Solomon Lefschetz, 2015-12-08 The first application of modern algebraic techniques to a comprehensive selection of classical geometric problems Written with spirit and originality this is a valuable book for anyone interested in the subject from other than the purely algebraic point of view Originally published in 1953 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 **New Developments in Differential Geometry, Budapest 1996** J. Szenthe, 2012-12-06 Proceedings of the Conference on Differential Geometry Budapest Hungary July 27 30 1996 *Geometry of Moduli* Jan Arthur Christophersen, Kristian Ranestad, 2018-11-24 The proceedings from the Abel Symposium on Geometry of Moduli held at Svin ya Rorbuer Svolv r in Lofoten in August 2017 present both survey and research articles on the recent surge of developments in understanding moduli problems in algebraic geometry Written by many of the main contributors to this evolving subject the book provides a comprehensive collection of new methods and the various directions in which moduli theory is advancing These include the geometry of moduli spaces non reductive geometric invariant theory birational geometry enumerative geometry hyper k hler geometry syzygies of curves and Brill Noether theory and stability conditions Moduli theory is ubiquitous in algebraic geometry and this is reflected in the list of moduli spaces addressed in this volume sheaves on varieties symmetric tensors abelian differentials log Calabi Yau varieties points on schemes rational varieties curves abelian varieties and hyper K hler manifolds *Gauge Field Theory and Complex Geometry* Yuri I. Manin, 2013-03-09 From the reviews focused mainly on

complex differential geometry and holomorphic bundle theory This is a powerful book written by a very distinguished contributor to the field Contemporary Physics the book provides a large amount of background for current research across a spectrum of field requires effort to read but it is worthwhile and rewarding New Zealand Math Soc Newsletter The contents are highly technical and the pace of the exposition is quite fast Manin is an outstanding mathematician and writer as well perfectly at ease in the most abstract and complex situation With such a guide the reader will be generously rewarded Physicalia This new edition includes an Appendix on developments of the last 10 years by S Merkulov Computational Arithmetic Geometry Kristin Estella Lauter, 2008 With the recent increase in available computing power new computations are possible in many areas of arithmetic geometry To name just a few examples Cremona's tables of elliptic curves now go up to conductor 120 000 instead of just conductor 1 000 tables of Hilbert class fields are known for discriminant up to at least 5 000 and special values of Hilbert and Siegel modular forms can be calculated to extremely high precision In many cases these experimental capabilities have led to new observations and ideas for progress in the field They have also led to natural algorithmic questions on the feasibility and efficiency of many computations especially for the purpose of applications in cryptography The AMS Special Session on Computational Arithmetic Geometry held on April 29-30 2006 in San Francisco CA gathered together many of the people currently working on the computational and algorithmic aspects of arithmetic geometry This volume contains research articles related to talks given at the session The majority of articles are devoted to various aspects of arithmetic geometry mainly with a computational approach **Conformal Differential Geometry and Its Generalizations** Maks A. Aivis, Vladislav V. Goldberg, 2011-09-20 Comprehensive coverage of the foundations applications recent developments and future of conformal differential geometry Conformal Differential Geometry and Its Generalizations is the first and only text that systematically presents the foundations and manifestations of conformal differential geometry It offers the first unified presentation of the subject which was established more than a century ago The text is divided into seven chapters each containing figures formulas and historical and bibliographical notes while numerous examples elucidate the necessary theory Clear focused and expertly synthesized Conformal Differential Geometry and Its Generalizations Develops the theory of hypersurfaces and submanifolds of any dimension of conformal and pseudoconformal spaces Investigates conformal and pseudoconformal structures on a manifold of arbitrary dimension derives their structure equations and explores their tensor of conformal curvature Analyzes the real theory of four dimensional conformal structures of all possible signatures Considers the analytic and differential geometry of Grassmann and almost Grassmann structures Draws connections between almost Grassmann structures and web theory Conformal differential geometry a part of classical differential geometry was founded at the turn of the century and gave rise to the study of conformal and almost Grassmann structures in later years Until now no book has offered a systematic presentation of the multidimensional conformal differential geometry and the conformal and almost Grassmann structures After years of intense research at their respective

universities and at the Soviet School of Differential Geometry Maks A Akivis and Vladislav V Goldberg have written this well conceived expertly executed volume to fill a void in the literature Dr Akivis and Dr Goldberg supply a deep foundation applications numerous examples and recent developments in the field Many of the findings that fill these pages are published here for the first time and previously published results are reexamined in a unified context The geometry and theory of conformal and pseudoconformal spaces of arbitrary dimension as well as the theory of Grassmann and almost Grassmann structures are discussed and analyzed in detail The topics covered not only advance the subject itself but pose important questions for future investigations This exhaustive groundbreaking text combines the classical results and recent developments and findings This volume is intended for graduate students and researchers of differential geometry It can be especially useful to those students and researchers who are interested in conformal and Grassmann differential geometry and their applications to theoretical physics

Connections Between Algebra, Combinatorics, and Geometry Susan M. Cooper, Sean Sather-Wagstaff, 2014-05-16 Commutative algebra combinatorics and algebraic geometry are thriving areas of mathematical research with a rich history of interaction Connections Between Algebra and Geometry contains lecture notes along with exercises and solutions from the Workshop on Connections Between Algebra and Geometry held at the University of Regina from May 29 June 1 2012 It also contains research and survey papers from academics invited to participate in the companion Special Session on Interactions Between Algebraic Geometry and Commutative Algebra which was part of the CMS Summer Meeting at the University of Regina held June 2 3 2012 and the meeting Further Connections Between Algebra and Geometry which was held at the North Dakota State University February 23 2013 This volume highlights three mini courses in the areas of commutative algebra and algebraic geometry differential graded commutative algebra secant varieties and fat points and symbolic powers It will serve as a useful resource for graduate students and researchers who wish to expand their knowledge of commutative algebra algebraic geometry combinatorics and the intricacies of their intersection

Parabolic Geometries I Andreas Čap, Jan Slovák, 2024-07-29 Parabolic geometries encompass a very diverse class of geometric structures including such important examples as conformal projective and almost quaternionic structures hypersurface type CR structures and various types of generic distributions The characteristic feature of parabolic geometries is an equivalent description by a Cartan geometry modeled on a generalized flag manifold the quotient of a semisimple Lie group by a parabolic subgroup Background on differential geometry with a view towards Cartan connections and on semisimple Lie algebras and their representations which play a crucial role in the theory is collected in two introductory chapters The main part discusses the equivalence between Cartan connections and underlying structures including a complete proof of Kostant's version of the Bott Borel Weil theorem which is used as an important tool For many examples the complete description of the geometry and its basic invariants is worked out in detail The constructions of correspondence spaces and twistor spaces and analogs of the Fefferman construction are presented both in general and in several examples

The last chapter studies Weyl structures which provide classes of distinguished connections as well as an equivalent description of the Cartan connection in terms of data associated to the underlying geometry. Several applications are discussed throughout the text.
