Abstract: *Psychological stressors are associated with a variety of health outcomes. However, the pathways through which these stressors operate are not well understood. This paper reviews the literature on the pathways through which psychological stressors operate, focusing on the role of the hypothalamic-pituitary-adrenal (HPA) axis and the sympathetic nervous system. The review suggests that these pathways are complex and involve a variety of factors, including individual differences and environmental factors. The review also suggests that these pathways are important for understanding the health outcomes associated with psychological stressors.*
