

INSTRUCTION MANUAL**Introduction**

The Filter Monitor continuously monitors the differential pressure (pressure drop) across a filter and alerts the operator of the need for element replacement when any of three operating criteria are met:

1. Maximum elapsed time (service interval) before change-out - operator alerted when user selected time period elapses.
2. Maximum allowable differential pressure - operator alerted when user selected maximum differential pressure occurs.
3. Intelligence - operator alerted when the optimum time to replace the element(s) has occurred. The Monitor calculates this using the element type, the initial characteristic pressure drop and historical pressure drop data.
