The impact of art therapy on mental health and well-being Helena José, Joao Apostolo, Luciano Vitorino, Luis Manuel Mota de Sousa, Martina Giusti, 2023-12-22 In 2019 the WHO came out with a scoping review related to the evidence on the role of the arts in improving health and well being In the last year in fact literature has recognized the direct and indirect benefits of art in the prevention and promotion of mental and physical health and in the management and treatment of disease Although some countries have made progress in developing policies that make use of the arts to support health and well being many have not yet addressed the opportunities that exist for using the arts to support health and for others policy activities have been time limited Nonetheless the relationship between art and health has existed since the birth of medicine itself and has strongly influenced its history and its evolution Art therapy is the main expression of art in health care The integration of art in traditional health assistance paths sustains the need to have a holistic approach to health wellness and well being both of patients and other stakeholders including caregivers and healthcare professionals Currently the main area of art therapy application is mental health with especially regards to disability both in developmental age and in elderly and both to cognitive and physical impairment and dementia However it is important to remark that mental health does not only refer to

mental illness but also to people's emotional psychological and social well-being. These last cases have particularly worsened with the long lockdown periods due to the COVID-19 pandemic.

Music and the Functions of the Brain: Arousal, Emotions, and Pleasure Mark Reybrouck, Tuomas Eerola, Piotr Podlipniak, 2018-04-12

Music impinges upon the body and the brain. As such, it has significant inductive power which relies both on innate dispositions and acquired mechanisms and competencies. The processes are partly autonomous and partly deliberate, and interrelations between several levels of processing are becoming clearer with accumulating new evidence. For instance, recent developments in neuroimaging techniques have broadened the field by encompassing the study of cortical and subcortical processing of the music. The domain of musical emotions is a typical example with a major focus on the pleasure that can be derived from listening to music. Pleasure, however, is not the only emotion to be induced, and the mechanisms behind its elicitation are far from understood. There are also mechanisms related to arousal and activation that are both less differentiated and at the same time more complex than the assumed mechanisms that trigger basic emotions. It is imperative, therefore, to investigate what pleasurable and mood-modifying effects music can have on human beings in real-time listening situations. This e-book is an attempt to answer these questions. Revolving around the specificity of music experience in terms of perception, emotional reactions, and aesthetic assessment, it presents new hypotheses, theoretical claims, as well as new empirical data which contribute to a better understanding of the functions of the brain as related to musical experience.

Focus on NAEP, 1994 Exploring Aesthetic Approaches to Arts Integration Marina Sotiropoulou-Zormpala, 2025-05-30

This book re-examines the role of arts integration in the preschool and primary school curricula, arguing for the creation of an educational environment where children can process every taught subject as an aesthetic stimulus. Deriving from the author's earlier work, this scholarly volume attempts to develop novel criteria for arts integration curricula through examining the effects of different indicative arts integration activities implemented in preschool and primary classrooms. Taking a pedagogical approach, chapters enable readers to connect theoretical insights

implementation strategies and corresponding methodological guidelines Ultimately this book argues that the aesthetic integration of the arts into the curricula of preschool and primary schools has three distinct important effects on the educational process fostering a more creative and productive education through a multilevel approach creating opportunities for holistic education by enhancing children s multifaceted learning involvement and promoting multimodal and inclusive education by providing diverse resources of meaning making This book will be of interest to researchers postgraduate students and academics in the fields of primary education curriculum studies teacher education and arts education Educational policymakers and teacher trainers may also benefit from this volume more broadly
