Writing Simplified D Sally Isaacs, 2024-12-31. This resource is for grades 6-8 and aligns to the International Reading Association (IRA) and National Council of Teachers of English (NCTE) Standard 3.4, 5.6, 7 and 12. Speaking and writing are probably the most important skills we learn in school and use in life. Yet writing is the skill that students are failing to grasp at alarming rates. Study after study concludes that writing abilities fall short of the demands of the communication age in which we live and work. Steps to Good Writing Simplified is a great resource for educators who are searching for materials that will ease the teaching and learning of how to write. Each theme-based lesson leads students through the writing process step by step. Step 1: What to Write. This brainstorming activity helps students think about topics they already know and build upon that knowledge. Step 2: How to Write It. This activity features a specific writing skill such as writing to describe or writing an opinion. Step 3: Make It Better. These exercises allow students to review and practice grammar and proofreading concepts. Step 4: Now Write. This culminating activity provides open-ended opportunities for students to actually write, applying what was learned in the previous steps. Steps to Good Writing Simplified is a series that provides structured practice without stifling creativity and enthusiasm. Its goal is to demystify the writing process so that students' reluctance to write is diminished and ultimately eliminated. And like any other process-based skill, writing more means writing better.

Essentials of Scientific Writing Joseph Mugah, 2016-12-13. Essentials of Scientific Writing: How to Write Effective Titles and Abstracts for Research Papers and Proposals is a belated entrant into a vast and crucially important area with scarce reference materials. This scarcity manifested itself as I searched what I had expected would be useful source materials for the present book. I skimmed through many textbooks on scientific writing and editing, articles on the Internet, and notes from courses on scientific writing. They all turned out to be manifestly wanting in both depth and scope. None extended beyond two pages and most were hardly a page long, so they were largely useless for my purposes. To the author's knowledge, few published books treat the subjects of Titles and Abstracts in the kind of detail presented in this book. Accordingly, in developing the book, the author hoped to fill a void in the crucial area of facilitating sharing of knowledge and information from research work. It is my hope that everyone writing scientific work will endeavor to find space for the book on their shelves and will place it within arm's length whenever they are writing or editing.
