**Academic Writing for Geographers** James A. Tyner,2023-08-21 There are many how to books on writing for academics none of these however relate specifically to the discipline of geography In this book the author identifies the principle modes of academic writing

that graduate students and early career faculty will encounter specifically focusing on those forms expected of geographers that is those modes that are reviewed by academic peers This book is readily accessible to senior undergraduate and graduate students and early career faculty who may feel intimidated by the process of writing This volume is not strictly a how to or step by step manual for writing an article or book rather through the use of real concrete examples from published and unpublished works the author demystifies the process of different types of scholarly pieces geographers have to write with the specific needs and challenges of the discipline in mind Although chapters are thematic based e g stand alone chapters on book reviews articles and books the manuscript is structured around the concept of story telling for it is the author's contention that all writing whether a scientific study or more humanist essay is a form of story telling The Social Science Encyclopedia Adam Kuper, 2003-12-16 The Social Science Encyclopedia first published in 1985 to acclaim from social scientists librarians and students was thoroughly revised in 1996 when reviewers began to describe it as a classic This third edition has been radically recast Over half the entries are new or have been entirely rewritten and most of the balance have been substantially revised Written by an international team of contributors the Encyclopedia offers a global perspective on the key issues within the social sciences Some 500 entries cover a variety of enduring and newly vital areas of study and research methods Experts review theoretical debates from neo evolutionism and rational choice theory to poststructuralism and address the great questions that cut across the social sciences What is the influence of genes on behaviour What is the nature of consciousness and cognition What are the causes of poverty and wealth What are the roots of conflict wars revolutions and genocidal violence This authoritative reference work is aimed at anyone with a serious interest in contemporary academic thinking about the individual in society **Why Transportation Fails** Astrid Wood, 2025-07-29 Why Transportation Fails offers an in depth critique of transportation failures in South Africa and beyond Minibus taxis are unreliable and overcrowded buses and trains are old and poorly maintained and new services are derailed by spiraling capital and operational costs protracted and politicized rollouts and unsolvable infrastructural challenges Rather than focusing on these failures the conceptual and practical analyses in this book develop a critical understanding of transportation and highlight the opportunities for transportation to be more inclusive innovative and sustainable This book applies cutting edge scholarship from geography and urban studies decolonial geographies Black geographies policy mobilities walking geographies animal geographies art geographies and health geographies to reframe transportation failure The interdisciplinarity of this scholarship builds an approach that not only tells the story of transportation in South Africa but also uncovers a range of conceptual interpretations and imaginations that stretch beyond urban mobilities and urban development In decentering traditional geographies of knowledge production Why Transportation Fails contributes to critical considerations of urban transportation in Africa and aspects of transportation justice within social and spatial transformation Given the never ending financial and political investment in solving transportation Why Transportation Fails is an essential

reading for scholars of architecture development geography politics sociology and urban planners and practitioners

*Transport, Mobility, and the Production of Urban Space* Julie Cidell, David Prytherch, 2015-05-01 The contemporary urban experience is defined by flow and structured by circulating people objects and energy Geographers have long provided key insights into transportation systems But today concerns for social justice and sustainability motivate new critical approaches to mobilities Reimagining the city prompts an important question How best to rethink urban geographies of transport and mobility This original book explores connections in theory and practice between transport geographies and new mobilities in the production of urban space It provides a broad introduction to intersecting perspectives of urban geography transport geography and mobilities studies on urban places of flows Diverse international and leading edge contributions reinterpret everyday intersections as nodes urban corridors as links cities and regions as networks and the discourses and imaginaries that frame the politics and experiences of mobility The chapters illuminate nearly all aspects of urban transport from street regulation and roadway planning intended and subversive practices of car and truck drivers planning and promotion of mass transit investments and the restructuring of freight and logistics networks Together these offer a unique and important contribution for social scientists planners and others interested in the politics of the city on the move **Journal of**

**Education** ,1917 **Journal** Manchester Geographical Society,1924 **A Comparative Political Ecology of Exurbia**

Laura E. Taylor, Patrick T. Hurley, 2016-05-26 This book is about politics and planning outside of cities where urban political economy and planning theories do not account for the resilience of places that are no longer rural and where local communities work hard to keep from ever becoming urban By examining exurbia as a type of place that is no longer simply rural or only tied to the economies of global resources e g mining forestry and agriculture we explore how changing landscapes are planned and designed not to be urban that is to look function and feel different from cities and suburbs in spite of new home development and real estate speculation The book's authors contend that exurbia is defined by the persistence of rural economies the conservation of rural character and protection of natural ecological systems all of which are critical components of the contentious local politics that seek to limit growth Comparative political ecology is used as an organizing concept throughout the book to describe the nature of exurban areas in the U S and Australia although exurbs are common to many countries The essays each describe distinctive case studies with each chapter using the key concepts of competing rural capitalisms and uneven environmental management to describe the politics of exurban change This systematic analysis makes the processes of exurban change easier to see and understand Based on these case studies seven characteristics of exurban places are identified rural character access local economic change ideologies of nature changes in land management coalition building and land use planning This book will be of interest to those who study planning conservation and land development issues especially in areas of high natural amenity or environmental value There is no political ecology book quite like this neither one solely focused on cases from the developed world in this case the United

States and Australia nor one that specifically harnesses different case studies from multiple areas to develop a central organizing perspective of landscape change      **The Journal of Education** ,1899
