Discovery-Based Learning in the Life Sciences Kathleen M. Susman, 2015-06-29 For nearly a decade scientists educators and policy makers have issued a call to college biology professors to transform undergraduate life sciences education As a gateway science for many undergraduate students biology courses are crucial to addressing many of the challenges we face such as climate change sustainable food supply and fresh water and emerging public health issues While canned laboratories and cook book approaches to college science education do teach students to operate equipment make accurate measurements and work well with numbers they do not teach students how to take a scientific approach to an area of interest about the natural world Science is more than just techniques measurements and facts science is critical thinking and interpretation which are essential to scientific research Discovery Based Learning in the Life Sciences presents a different way of organizing and developing biology teaching laboratories to promote both deep learning and understanding of core concepts while still teaching the creative process of science In eight chapters the text guides undergraduate instructors in creating their own discovery based experiments The first chapter introduces the text delving into the necessity of science

education reform The chapters that follow address pedagogical goals and desired outcomes incorporating discovery based laboratory experiences realistic constraints on such lab experiments model scenarios and alternate ways to enhance student understanding The book concludes with a reflection on four imperatives in life science research climate food energy and health and how we can use these laboratory experiments to address them Discovery Based Learning in the Life Sciences is an invaluable guide for undergraduate instructors in the life sciences aiming to revamp their curriculum inspire their students and prepare them for careers as educated global citizens

Competes Barry Bozeman, 2025-04-01 When science competes with myriad influences in public policymaking how can we ensure that it does so effectively Policymakers like most people today have a world of information within easy reach much of it wrong How amid the chaos and misdirection of our day's information ecosystem can science compete for the attention and trust of those who make public policy especially at a time when issues like proliferating infectious diseases and climate change put a premium on accurate and relevant scientific information What's needed Barry Bozeman suggests in *Science Competes* is a clearer understanding of how scientific information is conveyed how it is understood and used and where it fits in the wide array of information that might be of use to those who make and administer policy laws and regulations as well as citizens who actively participate in public life Acknowledging the importance of different sorts of information historical experiential political to decision making Bozeman focuses on enhancing not maximizing the effective use of science in public policy This entails recognizing that valid and useful scientific information is not necessarily formal scientific knowledge but often takes the form of science by products such as raw or structured data graphics and conceptual models Explaining how such information can be better distinguished from half truths and pernicious falsehoods *Science Competes* also raises the possibility that effective competition might require improvements in science institutions norms and ideas about acceptable behavior **CBSE 20 Combined Sample Question papers Class 10 (For Board Exam 2024) Books Science,**

The Climate of History in a Planetary Age Dipesh Chakrabarty,2024-05-31 For the past decade historian Dipesh Chakrabarty has been one of the most influential scholars addressing the meaning of climate change Climate change he argues upends long standing ideas of history modernity and globalization The burden of The Climate of History in a Planetary Age is to grapple with what

this means and to confront humanities scholars with ideas they have been reluctant to reconsider from the changed nature of human agency to a new acceptance of universals Chakrabarty argues that we must see ourselves from two perspectives at once the planetary and the global This distinction is central to Chakrabarty s work the globe is a human centric construction while a planetary perspective intentionally decenters the human Featuring wide ranging excursions into historical and philosophical literatures *The Climate of History in a Planetary Age* boldly considers how to frame the human condition in troubled times As we open ourselves to the implications of the Anthropocene few writers are as likely as Chakrabarty to shape our understanding of the best way forward
