Satellite Regulation in Europe

Stéphan Le Goueff, 2021-10-25 Commercial satellite activities have undergone enormous growth in the last decades and so has the complexity of the legal framework within which these activities have to be carried out Because of the international character of satellite activities this legal framework has often been established on an international or regional level through institutions such as the European Union the International Telecommunications Union the World Trade Organisation and the European Conference of Postal and Telecommunications Administrations It is not an easy task to obtain a complete picture of this legal framework For this reason it was considered opportune to assemble all relevant legal texts and materials established by these institutions into one book As telecommunications is currently the most important commercial application of satellites it should come as no

surprise to anyone that the main part of the book is dedicated to this application simply because of the fact that the legal framework is furthest developed. However, relevant texts and materials for the three other commercial satellite activities: broadcasting, remote sensing and navigation have also been included. This book is a very valuable tool for all those involved in the European satellite business or for those who want to get involved in it, whether they are lawyers or non-lawyers, everyone is affected by the laws and regulations governing this field and everyone should be aware of the limitations these laws and regulations might impose.

GMDSS Manual International Maritime Organization, 2007. The entry into force and implementation of the global maritime distress and safety system GMDSS between 1992 and 1999 was the most far-reaching development in maritime emergency assistance since the invention of the radio. The GMDSS Manual presents the principles on which the GMDSS is based, the requirements for its implementation, the standards to be met by GMDSS equipment and the method of operation of the various radio services which make up the GMDSS. The annexes give comprehensive information on all aspects of the GMDSS, including primary texts such as relevant texts of the 1974 SOLAS Convention relevant to the GMDSS, relevant IMO Assembly resolutions, MSC and COM circulars, articles of the Radio Regulations, resolutions of WARC and WARC Mob 87 conferences, IMO performance standards and related ITU-R recommendations and the Master Plan for the GMDSS. Publisher's description.

Mobile Satellite Communications Handbook Roger Cochetti, 2014-09-25. With a Preface by noted satellite scientist Dr Ahmad Ghais, the Second Edition reflects the expanded user base for this technology by updating information on historic, current and planned commercial and military satellite systems and by expanding sections that explain the technology for non-technical professionals. The book begins with an introduction to satellite communications and goes on to provide an overview of the technologies involved in mobile satellite communications, providing basic introductions to RF issues, power issues, link issues and system issues. It describes early commercial mobile satellite communications systems such as Marisat and Marecs and their military counterparts. The book then discusses the full range of Inmarsat and other current and planned geostationary, low earth orbiting and hybrid mobile satellite systems from over a dozen countries and companies. It is an essential guide for anyone seeking a comprehensive understanding of this industry and military tool. Revised edition will serve both technical and non-technical professionals who rely every day on mobile satellite communications. Describes and explains historic, current and planned civil, commercial and military mobile satellite communication systems. First Edition charts and tables updated and expanded with current material for today's mobile satellite technology.
