

ADJUSTING POSITION OF SEAT

Adjust seat by loosening knobs and sliding seat forward or backward to the most comfortable position. Tighten knobs.

ADJUSTING REAR WHEEL TREAD

Narrow Tread

Rear wheels are factory assembled in the narrow tread position. For greater stability, especially on hillsides, wheels can be turned around on the hubs for a wide wheel tread as explained at right above.

Wide Tread

Tractors with GT-3 or GT-5 High-Flotation Tires

Remove wheel bolts; turn wheel around with valve stem inward, and reassemble on hub.

Tractors with GT-4 or GT-6 Traction Tires

Remove wheel bolts, turn wheel around with valve stem inward and reassemble each wheel on the opposite side of the tractor. Interchanging right-hand and left-hand rear wheels is required to maintain the proper direction of rotation for traction tires. Tread (and arrow) on the must point forward in direction of travel.

ADJUSTING INTEGRAL HITCH (Extra Equipment)

Use the manual, electric or hydraulic lift lever to raise or lower the integral hitch.

Adjust the height of the hitch with the handwheel. Turn the handwheel clockwise to lower the hitch; turn it counterclockwise to raise the hitch. Turn the handwheel counterclockwise all the way to hold the hitch in the raised position for transport.

To avoid difficult steering when pulling an implement having a heavy draft, loosen cap screws "A" to allow the implement to "sway" on the hitch. For rigid "straight-line" mounting, tighten cap screws evenly.

Use front frame weights or front wheel weights when working with rear-mounted tools to aid steering and provide additional stability.

CAUTION: Be careful tractor does not upset when working with rear-mounted tools, especially when working on hillsides. Always back up a steep incline and work downhill.

John Deere 212 Operators Manual
