Structure and Function of Running Waters is designed to serve as a textbook for advanced undergraduate and graduate
students and as a reference source for specialists in stream ecology and related fields This Third Edition is thoroughly
updated and expanded to incorporate significant advances in our understanding of environmental factors biological
interactions and ecosystem processes and how these vary with hydrological geomorphological and landscape setting The
broad diversity of running waters from torrential mountain brooks to large lowland rivers to great river systems whose basins
occupy sub continents makes river ecosystems appear overwhelming complex A central theme of this book is that although
the settings are often unique the processes at work in running waters are general and increasingly well understood Even as
our scientific understanding of stream ecosystems rapidly advances the pressures arising from diverse human activities
continue to threaten the health of rivers worldwide This book presents vital new findings concerning human impacts and the
advances in pollution control flow management restoration and conservation planning that point to practical solutions
