The original chapters provide authoritative commentaries and in depth descriptions of research programs that will guide 21st century scholars, graduate students and industry professionals. Human Computer Interaction or Human Factors in MIS is concerned with the ways humans interact with information technologies and tasks especially in business, managerial, organizational and cultural contexts. It is distinctive in many ways when compared with HCI studies in other disciplines. The MIS perspective affords special importance to managerial and organizational contexts by focusing on analysis of tasks and outcomes at a level that considers organizational effectiveness. This work focuses on applications and evaluations including special case studies, specific contexts or tasks, HCI methodological concerns and the use and adoption process.
