

OPERATING INSTRUCTIONS

CHAIN BRAKE OPERATION

Your chain saw is equipped with a CHAIN BRAKE that reduces the possibility of injury due to "kickback." The brake is actuated if pressure is applied against the lever when, as in the event of "kickback," the operator's hand strikes the lever. When the brake is actuated, chain movement stops abruptly.

CAUTION: Purpose of the CHAIN BRAKE is to reduce the possibility of injury due to "kickback," but it can not provide the measure of protection intended if the saw is operated carelessly.

The CHAIN BRAKE is disengaged (the chain can move) when the brake lever is pulled back and locked. (a)

The CHAIN BRAKE is engaged (chain is stopped) when the brake lever is in the forward position. (b)

When the brake has been tripped and engaged (chain stops) immediately release the throttle trigger to prevent damage to engine or clutch.

If the CHAIN BRAKE has been actuated and the engine is idling, grasp the brake lever firmly and pull back to the locked position while controlling the saw with a hand grasping the rear handle. Be careful not to squeeze the throttle trigger.

NOTE: Do not attempt to start or operate the engine with the brake engaged (chain is stopped). Do not allow the engine to idle for long periods of time when the brake is engaged as this tends to build up heat in the sprocket bearing.
