Addition and Subtraction Thomas P. Carpenter, James M. Moser, Thomas A. Romberg, 2020-08-15 A hallmark of much of the research on children s thinking in the 1970s had been the focus on explicit content domains Much of this research had been represented by an eclectic collection of studies sampled from a variety of disciplines and content areas However in the few years before this publication research in several content domains has begun to coalesce into a coherent body of knowledge Originally published in 1982 the chapters in this work represent one of the first attempts to bring together the perspectives of a variety of different researchers investigating a specific well defined content domain This book presents theoretical views and research findings of a group of international scholars who are investigating the early acquisition of addition and subtraction skills by young children Together the contributors bring a blend of psychology educational psychology and mathematics education to this topic Fields of interest such as information processing artificial intelligence early childhood and classroom teaching and learning are included in this blend

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker

show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

Elementary Mathematics Curriculum Materials Janine T. Remillard, Ok-Kyeong Kim, 2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U S from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process Although the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors

support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors **Software for Schools** ,1987 **Problem Solver II: Grade 4 Student Book (Set of 5)** Judy Goodnow, Shirley Hoogetboom, 2004-01-09 This series of six books guides students through step by step instruction in mathematical problem solving Ten valuable problem solving strategies are introduced and students learn how to apply each strategy using a 4 step method **UGC NET Paper 2 _ Education Volume - 2** Mr. Rohit Manglik, 2024-03-04 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels *ENC Focus Review* ,2003 **What Does Understanding Mathematics Mean for Teachers?** Yuichi Handa, 2013-05-13 This book opens up alternative ways of thinking and talking about ways in which a person can know a subject in this case mathematics leading to a reconsideration of what it may mean to be a teacher of that subject In a number of European languages a distinction is made in ways of knowing that in the English language is collapsed into the singular word know In French for example to know in the savoir sense is to know things facts names how and why things work and so on whereas to know in the connaître sense is to know a person a place or even a thing namely an other in such a way that one is familiar with or in relationship with this other Primarily through phenomenological reflection with a touch of empirical input this book fleshes out an image for what a person's connaître of mathematics might mean turning to mathematics teachers and teacher educators to help clarify this image **Cooperative Research Monograph: 3, Research Problems in Mathematics Education, Reports from Conference on Psychological Problems and Research Methods, with Lists of References** United States.
