Handbook of Materials Failure Analysis with Case Studies from the Aerospace and Automotive Industries Abdel Salam Hamdy Makhlouf, Mahmood Aliofkhaezrai, 2015-09-01 Handbook of Materials Failure Analysis With Case Studies from the Aerospace and Automotive Industries provides a thorough understanding of the reasons materials fail in certain situations covering important scenarios including material defects mechanical failure as a result of improper design corrosion surface fracture and other environmental causes The book begins with a general overview of materials failure analysis and its importance and then logically proceeds from a discussion of the failure analysis process types of failure analysis and specific tools and techniques to chapters on analysis of materials failure from various causes Later chapters feature a selection of newer examples of failure analysis cases in such strategic industrial sectors as aerospace oil gas and chemicals Covers the most common types of materials failure analysis and possible solutions Provides the most up to date and balanced coverage of failure analysis combining foundational knowledge current research on the latest developments and innovations in the field Ideal accompaniment for those interested in materials forensic investigation failure of materials static failure analysis dynamic failure analysis fatigue life prediction rotorcraft failure prediction fatigue crack propagation bevel pinion failure gasketless flange thermal barrier coatings Presents compelling new case studies from key industries to demonstrate concepts Highlights the role of site conditions operating conditions at the time of failure history of equipment and its operation corrosion product sampling metallurgical and electrochemical factors and morphology of failure

Structural Sensitivity Analysis and Optimization 1 Kyung K. Choi, Nam-Ho Kim, 2006-12-30 Structural design sensitivity analysis concerns the relationship between design variables available to the design engineer and structural responses determined by the laws of mechanics The dependence of response measures such as displacement stress strain natural frequency buckling load acoustic response frequency response noise vibration harshness NVH thermo elastic response and fatigue life on the material property sizing component shape and configuration design variables is defined through the governing equations of structural

mechanics In this 2 volume set first and second order design sensitivity analyses are presented for static and dynamics responses of both linear and nonlinear elastic structural systems including elasto plastic and frictional contact problems Book I introduces structural design concepts that include the CAD based design model design parameterization performance measures costs and constraints It also discusses design sensitivity analysis of linear structural systems and discrete and continuum design sensitivity analysis methods
