a wide ornithological readership especially the many raptor enthusiasts around the world      **Engineering and Mining Journal** ,1883      **The Condor** ,1914      **Reviews of Environmental Contamination and Toxicology Volume 237** W.P. de Voogt,2015-11-27 Reviews of Environmental Contamination and Toxicology attempts to provide concise critical reviews of timely advances philosophy and significant areas of accomplished or needed endeavor in the total field of xenobiotics in any segment of the environment as well as toxicological implications      Review of U.S. Department of Agriculture's Export Credit Guarantees Extended to Iraq United States. Fleming,2012-12-06 A wide variety of plants ranging in size from forest floor herbs to giant canopy trees rely on animals to disperse their seeds

Typical values of the proportion of tropical vascular plants that produce fleshy fruits and have animal dispersed seeds range from 50-90% depending on habitat. In this section the authors discuss this mutualism from the plant's perspective. Herrera begins by challenging the notion that plant traits traditionally interpreted as being the product of fruit-frugivore coevolution really are the outcome of a response-counter response kind of evolutionary process. He uses examples of congeneric plants living in very different biotic and abiotic environments and whose fossilizable characteristics have not changed over long periods of time to argue that there exists little or no basis for assuming that gradualistic change and environmental tracking characterizes the interactions between plants and their vertebrate seed dispersers. A common theme that runs through the papers by Herrera, Denslow et al. and Stiles and White is the importance of the fruiting environment, i.e. the spatial relationships of conspecific and non conspecific fruiting plants on rates of fruit removal and patterns of seed rain. Herrera and Denslow et al. point out that this environment is largely outside the control of individual plant species and as a result closely coevolved interactions between vertebrates and plants are unlikely to evolve.
