Abstract

Table 1

All members of the crew should become thoroughly familiar with the location and operation of controls, the correct operating procedures, the maximum lifting capacities and the safety procedures applicable to the unit before operating. This course is a complete review of essential and can be reinforced in many ways. Carefully review the operating procedures outlined below and in the instructional pages of the team rating chart at the instructor's station.

Abstract

Systems like *Automated CheckMate* for detecting the end of a session.

- Inspect in any adverse conditions such as poor hydraulic fluid or tampering of valves the operation, any leakage which may have past time or a warning sign of leakage or improper maintenance
- Check that the lines are released in the proper position
- Check the level of the hydraulic reservoir
- Check the operation of the 'stop' and 'down' valves
- Check for missing and loose bolts
- Check for damaged structural members and seals
- Check all rope guides and cable hangers
- Check all shrouds for free turning
- Check the hoisting cable for kinks, broken strands or other damage it accompanied with its shrouds & the 'hoisting & Reconnection' section
- Check to see that the hydraulic hoses are in good use in good condition and show no signs of leaking. The hoses should be free-flow and no obstructions and there should be no evidence of leaking. Any leakage or damage should be replaced immediately
- Check hydraulic A and air-line brake system or A/B and air-line brake system for proper operation

Water: Connect your water filter to the manual for correct operation.

Fire Operations Inspector and Assistant to Fire Chief

1. Check the electrical wiring connecting the output units of the system to physical storage.

The following tests shall be performed with care to prevent damage to the machine or injury to personnel. Proper functioning of the system requires successful completion of these tests before operating the machine.

If the operator cannot use the load-handling facility supporting the chosen mode, he/she has to use an auxiliary input device, such as the load handling device. The operator will be progressively using the machine instead and, therefore, will not improve the L50 and L50max load-handling property.
