Thomas,2021-12-22 The Hellenistic Period witnessed striking new developments in art literature and science This volume addresses a particularly vibrant area of innovation the study of animals and the natural world While Aristotle and his followers had revolutionized fields such as zoology and botany during the fourth century BC these disciplines took on exciting new directions during Hellenistic times Kings imported exotic species into their royal capitals from faraway lands Travel writers described unusual creatures that they had never previously

encountered And buyers from a range of social levels chose works of art featuring animals and plants to decorate their palaces houses and tombs While textual sources shed some light on these developments the central premise of Art Science and the Natural World in the Ancient Mediterranean is that our surviving artistic evidence permits a fuller understanding Accordingly the study brings together a rich body of visual material that invites new observations on how and why knowledge of the natural world became so important during this period It is suggested that this cultural phenomenon affected many different groups in society from kings in Alexandria and Pergamon to provincial aristocrats in the Levant and from the Julio Claudian imperial family to prosperous homeowners in Pompeii By analysing the works of art produced for these individuals a vivid picture emerges of this remarkable aspect of ancient culture *Computer Vision* Jinfeng Yang,Qinghua

Roughness Observed by High Resolution Radar Atsushi Fujimura, Susanne Lehner, Alex Soloviev, Xiaofeng Li, 2019-10-25 Changes in sea surface roughness are usually associated with a change in the sea surface wind field. This interaction has been exploited to measure sea surface wind speed by scatterometry. A number of features on the sea surface associated with changes in roughness can be observed by synthetic aperture radar (SAR) because of the change in Bragg backscatter of the radar signal by damping of the resonant ocean capillary waves. With various radar frequencies, resolutions, and modes of polarization, sea surface features have been analyzed in numerous campaigns, bringing various datasets together, thus allowing for new insights into small-scale processes at a larger areal coverage. This Special Issue aims at investigating sea surface features detected by high spatial resolution radar systems such as SAR. **Natural Language Processing and Chinese Computing** Fei Liu, Nan Duan, Qingting Xu, Yu Hong, 2023-10-07 This three-volume set constitutes the refereed proceedings of the 12th National CCF Conference on Natural Language Processing and Chinese Computing NLPCC 2023 held in Foshan, China, during October 12-15, 2023. They were organized in topical sections as follows: dialogue systems, fundamentals of NLP, information extraction and knowledge graph, machine learning for NLP, machine translation and multilinguality, multimodality and explainability, NLP applications and text mining, question answering, large language models, summarization and generation, student workshop, and evaluation workshop.
