Nature Journal Impact Factor:

The Nature of Scientific Innovation, Volume I David Dent, 2024-12-01 Innovation is a major driver of social economic and environmental change and is researched extensively by academics from disciplines as diverse as business engineering economics sociology and psychology On the whole each discipline pursues its own pathway to understanding without an interdisciplinary framework that links diverse research outputs This partite structure creates a remove from the practical realities of entrepreneurship and the innovators who operate and perceive innovation in its entirety This book delivers insights and creates a different framework one that includes terminologies and typologies greater understanding of paradigmatic influences in science needs vs wants and demand impact and value of knowledge publications and patents and economic benefits It challenges current approaches to education research creativity and skills development infrastructure investment and policy This book addresses changes needed to better deliver innovation at a time when the world is desperate for solutions to global problems It will be of interest to scholars and students of innovation from multiple disciplines as well as practitioners policymakers and all those with an interest in scientific innovation The first volume focuses on the processes the means and the impact of scientific innovation It highlights the way scientific research came to the fore as an instrument of government policy for economic growth the way research is undertaken the structures and processes involved the values biases and limitations associated with them and why these matter for innovation Questions are asked about who innovation is for and whether value is being captured in ways that really matter whether the systems are fit for purpose and how meaningful impact could be delivered to meet societal economic and environmental needs and priorities *Encyclopedia of Nanoscience and Society* David H. Guston, 2010 Because of their far reaching consequences truly transformative technologies always generate controversy This encyclopedia covers the ethical legal policy social economic and business issues raised by nanoscience **Unreliable** Csaba Szabo, 2025-03-11 Reproducibility is fundamental to the scientific method After reading a paper describing research findings a scientist should be able to repeat the experiment and obtain the same results Yet an alarming number perhaps as high as 90 percent of published biomedical research papers face challenges in independent replication Such issues range from honest mistakes to outright fraud The scope of this crisis however underscores deeper systemic issues within the scientific community its culture incentives and institutions In *Unreliable* the distinguished scientist Csaba Szabo examines the causes and consequences of the reproducibility crisis in biomedical research showing why the factors that encourage misconduct stem from flaws in real world science There are many culprits including commonplace research methods and dubious statistical techniques Academic career incentives hypercompetition for grant funding and a bias toward publishing positive results have exacerbated the problem Deliberate data manipulation and fabricated findings churned out by paper mills are disturbingly common Academic institutions and publishers for their part have perpetuated a culture of impunity Szabo explores how these failures have hindered scientific progress and impeded the development of new

treatments and he introduces readers to the science sleuths who tirelessly uncover misconduct He proposes comprehensive reforms from scientific training to the grant system through the publication process to address the root causes of the crisis Written in clear language and leavened with a keen sense of irony **Unreliable** is an essential account of the reproducibility crisis that gives readers an inside look at how science is actually done **Journal of the National Cancer Institute**,1999-05 **Nature Science and Sustainable Technology Research Progress** ,2008 Nature thrives on diversity and flexibility gaining strength from heterogeneity whereas the quest for homogeneity seems to motivate much of modern engineering Nature is non linear and inherently promotes multiplicity of solutions This book presents lively analyses of urgent problems in nature science **Handbook Bibliometrics** Rafael Ball,2020-12-07 Bibliometrics and altmetrics are increasingly becoming the focus of interest in the context of research evaluation The Handbook Bibliometrics provides a comprehensive introduction to quantifying scientific output in addition to a historical derivation individual indicators institutions application perspectives and data bases Furthermore application scenarios training and qualification on bibliometrics and their implications are considered **Health and Medical Public Relations** Myc Riggulsford,2013-08-21 Health and Medical Public Relations takes a fresh look at media relations and news values It examines how information about medical research from the academic pharmaceutical and charitable sectors is disseminated to target audiences through a variety of PR techniques Scrutinising a wide range of health related public relations activities the book combines a critical analytical and cultural overview of these methods with helpful guidance on their practical application Key features include Advice on how to write and place effective press releases plan and budget for campaigns and anticipate responses from different sectors and the wider public Coverage of different types of communication and consultancy including the controversial areas of lobbying and access to influential policy makers Case studies on the way in which experienced journalists and public relations practitioners gain coverage for their work with plentiful examples drawn from both recent media scares and long running issues A survey of the way challenging public relations issues have been perceived in the past analysing the attitudes of both legislators and the public A user friendly format designed to reinforce learning including handy tips definition boxes explaining key words and concepts and exercises and reflection points to stimulate group discussion and reflection on specific examples of science and medical PR practice Wide ranging and highly accessible this book will be an essential resource for undergraduates postgraduates and professionals learning to specialise in health public relations **Nobel Life** Stefano Sandrone,2021-06-17 Few people have changed the world like the Nobel Prize winners Their breakthrough discoveries have revolutionised medicine chemistry physics and economics Nobel Life consists of original interviews with twenty four Nobel Prize winners Each of them has a unique story to tell They recall their eureka moments and the challenges they overcame along the way give advice to inspire future generations and discuss what remains to be discovered Engaging and thought provoking Nobel Life provides an insight into life behind the Nobel Prize winners A call

The Matter of Facts Gareth Leng,Rhodri Ivor Leng,2020-03-18 How biases the desire for a good narrative reliance on citation metrics and other problems undermine confidence in modern science Modern science is built on experimental evidence yet scientists are often very selective in deciding what evidence to use and tend to disagree about how to interpret it In *The Matter of Facts* Gareth and Rhodri Leng explore how scientists produce and use evidence They do so to contextualize an array of problems confronting modern science that have raised concerns about its reliability the widespread use of inappropriate statistical tests a shortage of replication studies and a bias in both publishing and citing positive results Before these problems can be addressed meaningfully the authors argue we must understand what makes science work and what leads it astray The myth of science is that scientists constantly challenge their own thinking But in reality all scientists are in the business of persuading other scientists of the importance of their own ideas and they do so by combining reason with rhetoric Often they look for evidence that will support their ideas not for evidence that might contradict them often they present evidence in a way that makes it appear to be supportive and often they ignore inconvenient evidence In a series of essays focusing on controversies disputes and discoveries the authors vividly portray science as a human activity driven by passion as well as by reason By analyzing the fluidity of scientific concepts and the dynamic and unpredictable development of scientific fields the authors paint a picture of modern science and the pressures it faces
