

Chapter 13

Answers

QUICK-CHECK questions

- 1 List two types of variation that may be seen in populations of dogs.**

Examples of variation in dog populations include:

- black/yellow coat colour
- black/liver coat colour
- presence/absence of body hair
- presence/absence of white spotting
- long/short leg length.

- 2 Give an example of developmental variation in:**

- a a plant species**

One example of developmental variation in a plant species is the change from green, unripe fruit to red, ripe fruit in blackberries (see figure 13.12).

- b a bird species.**

One example of developmental variation in a bird species is the change in plumage as seagulls develop from juveniles to adults.

- 3 Give an example of a population that:**

- a is polymorphic for a trait**

Any population that shows two or a few discrete inherited variations for a trait is said to be polymorphic; an example is lupin populations that show purple and pink flower colour.

(In contrast, in a monomorphic population, all members are uniform for a particular trait; an example is the pink and grey plumage of galahs (see figure 13.13).)

- b shows discontinuous variations in a trait.**

Discontinuous variation occurs in a population when a small number of discrete, non-overlapping variants of a trait exist. For example, in a human population, people fall into one of four distinct ABO blood types; they may be group A or group B or group AB or group O.

(Note: This is just one of many example of discontinuous variation that can be seen in plant and animal populations. Table 13.4 lists some other examples.)

- 4 At different times of the year, members of a population of water fleas (*Daphnia* sp.) vary in the size and shape of their outer head covering.**

- a Is this likely to be an inherited variation? Explain.**

The change in head shape and size is most likely to be an environmental variation since the change is seasonal, occurring at certain times of the year. However, the ability to make this change is an inherited characteristic that has evolved in only some *Daphnia* species.

In Search of Human Nature Carl N. Degler, 1992-11-05 Winner of the Pulitzer Prize in History in 1972 and a past president of both the Organization of American Historians and the American Historical Association Carl Degler is one of America's most eminent living historians He is also one of the most versatile In a forty year career he has written brilliantly on race Neither Black Nor White which won the Pulitzer Prize women's studies At Odds which Betty Friedan called a stunning book Southern history The Other South the New Deal and many other subjects Now in The Search for Human Nature Degler turns to perhaps his largest subject yet a sweeping history of the impact of Darwinism and biological research on our understanding of human nature providing a fascinating overview of the social sciences in the last one hundred years The idea of a biological root to human nature was almost universally accepted at the turn of the century Degler points out then all but vanished from social thought only to reappear in the last four decades Degler traces the early history of this idea from Darwin's argument that our moral and emotional life evolved from animals just as our human shape did to William James's emphasis on instinct in human behavior then seen as a fundamental insight of psychology We also see the many applications of biology from racism sexism and Social Darwinism to the rise of intelligence testing the eugenics movement and the practice of involuntary sterilization of criminals a public policy pioneered in America which had sterilization laws 25

years before Nazi Germany one such law was upheld by Oliver Wendell Holmes's Supreme Court. Degler then examines the work of those who denied any role for biology who thought culture shaped human nature a group ranging from Franz Boas, Ruth Benedict and Margaret Mead to John B. Watson and B. F. Skinner. Equally important he examines the forces behind this fundamental shift in a scientific paradigm arguing that ideological reasons especially the struggle against racism and sexism in America led to this change in scientific thinking. Finally Degler considers the revival of Darwinism without the Social Darwinism racism and sexism led first by ethologists such as Karl von Frisch, Nikolaas Tinbergen, Konrad Lorenz and Jane Goodall who revealed clear parallels between animal and human behavior and followed in varying degrees by such figures as Melvin Konner, Alice Rossi, Jerome Kagan and Edward O. Wilson as well as others in anthropology, political science, sociology and economics. What kind of animal is Homo sapiens and how did we come to be this way? In this wide-ranging history Carl Degler traces our attempts over the last century to answer these questions. In doing so he has produced a volume that will fascinate anyone curious about the nature of human beings.

Biology, Evolution, and Human Nature Timothy H. Goldsmith, William F. Zimmerman, 2000-11-16. Dieses Buch bietet eine ausgewogene Darstellung der Kerntheorien und Grundlagen des Evolutionsgedankens und macht deutlich, wie diese Theorien das menschliche Verhalten beeinflussen. Aus evolutionsgeschichtlicher Sicht werden die Verbindungen zwischen den einzelnen Stufen biologischer Komplexität zurckverfolgt von den Genen über das Nervensystem bis hin zu Tiergesellschaften und menschlichen Kulturen. Analysiert wird die Geschichte der Evolutionstheorie von Darwin bis zur Gegenwart wobei ein besonderer Schwerpunkt auf der Molekularbiologie und der evolutionären Sozialtheorie liegt. Enthalten sind auch neue Arbeiten zu Primatengesellschaften und der Entwicklungsgeschichte des Menschen. Geschrieben von zwei hervorragenden Dozenten auf dem Gebiet der menschlichen Ethologie.

12 00 **Nature**, 1890 *Kindred Nature* Barbara T. Gates, 1998. Centers on what a number of British Victorian and Edwardian women said and did in the name of nature, what part they played in the cultural reconstruction of nature that transpired in the years just proceeding the publication of Darwin's major work and in the wake of the Darwinian revolution.

The Nature of Scientific Evidence Mark L. Taper, Subhash R. Lele, 2010-12-15. An exploration of the statistical foundations of scientific inference. The Nature of Scientific Evidence asks what constitutes scientific evidence and whether scientific evidence can be quantified statistically. Mark Taper, Subhash Lele and an esteemed group of contributors explore the relationships among hypotheses, models, data and inference on which scientific progress rests in an attempt to develop a new quantitative framework for evidence. Informed by interdisciplinary discussions among scientists, philosophers and statisticians, they propose a new evidential approach which may be more in keeping with the scientific method. The Nature of Scientific Evidence persuasively argues that all scientists should care more about the fine points of statistical philosophy because therein lies the connection between theory and data. Though the book uses ecology as an exemplary science, the interdisciplinary evaluation of the use of statistics in empirical research will be of interest to any

reader engaged in the quantification and evaluation of data In Search of Human Nature Mary E. Clark,2005-08-18 In this magisterial new work biologist Mary Clark argues that the Western view of human nature is built around highly atomistic and ideological framework that encourages us to think about the world and ourselves in the wrong way Catalog of Copyright Entries.
