Stresszustände bewirken körperliche Symptome lindern und zu innerer Ruhe und Kraft finden *Eye movement-related brain activity during perceptual and cognitive processing* Andrey R. Nikolaev, Sebastian Pannasch, Junji Ito, Artem Belopolsky, 2014-09-23 The recording and analysis of electrical brain activity associated with eye movements has a history of several decades While the early attempts were primarily focused on uncovering the brain mechanisms of eye movements more recent approaches use eye movements as markers of the ongoing brain activity to investigate perceptual and cognitive processes This recent approach of segmenting brain activity based on eye movement behavior has several important advantages First the eye movement system is closely related to cognitive functions such as perception attention and memory This is not surprising since eye movements provide the easiest and the most accurate way to extract information from our visual environment and the eye movement system largely determines what information is selected for further processing The eye movement based segmentation offers a great way to study brain activity in relation to these processes Second on the methodological level eye movements constitute a natural marker to segment the ongoing brain activity This overcomes the problem of introducing artificial markers such as ones for stimulus presentation or response execution that are typical for a lab based research This opens possibilities to study brain activity during self paced perceptual and cognitive behavior under naturalistic conditions such as free exploration of scenes Third by relating eye movement behavior to the ongoing brain activity it is possible to see how perceptual and cognitive processes unfold in time being able to predict how brain activity eventually leads to behavior This research topic illustrates advantages of the combined recording and analysis of eye movements and neural signals such as EEG local field potentials and fMRI for investigation of the brain processes in humans and animals The contributions include research papers methodology papers and reviews demonstrating conceptual and methodological achievements in this rapidly developing field *Superyacht Master* Robert Avis, 2013-08-22 *Superyacht Master* covers the requirements of the navigation and radar modules for the Officer of the Watch Yachts and the Master Yachts Certificates required for captains and crew of commercial yachts over 24m and under 3 000 tons It is the only book written specifically for these modules and will be required reading for all those undertaking a deck career in the superyacht industry or in similar sized commercial craft This book is intended for the next level of navigators after Yachtmaster and is an extension of the current series of very successful and highly regarded course instruction books available from Adlard Coles Nautical At long last someone has written an in depth reference manual on radar operation for the masters of large yachts Every superyacht should have a copy on the bridge John Wyborn Director The Crew Training Centre Antibes **Embodying Tool Use: From Cognition to Neurorehabilitation** Mariella Pazzaglia, Giulia Galli, Yusuf Ozgur Cakmak, Jan Babic, 2020-12-18 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics
