This non-fictional yet storytelling book questions the role of cars and their impact both for now and in the future. It is not enough to just consider autonomous driving; driving bans in Europe and combustion engines. Our future and the future of our cities and country living depend on how we can coordinate different needs and different means. And who benefits from autonomous driving and what are we giving up for it? In this book, the editor's work illustrates and critically assesses the role of cars. It showcases project examples and introduces easy-to-use checklists. The authors show how the car influences our business and private lives and how the car stimulates our appetite for adventures, recreation, and survival. Emerging throughout more than a century purposefully deployed and innovatively used, the automobile grew into our mobility DNA beyond horsepower and equipment. The car has been evolving into an adventure space, a survival space, and a growth space. The editor and authoring team present innovative services, digital use cases, and smart data that are worth considering. The concept of Smart Mobility offers the possibility to retrieve the appropriate means of transport for individual and freight traffic in a forward-looking digital and intermodal way. *Smart Mobility in practice: Good car, bad car, no car* by DoktorB Barbara Flügge and team is aimed at decision makers and entrepreneurs as well as project managers and their teams in the context of smart city and digital transformation projects.
