2. In this step you will test an inverting amplifier. All data are to be recorded in Table 20-2. The circuit is illustrated in Figure 20-4. The closed-loop gain is:

$$A_{cl(D)} = -\frac{R_f}{R_i}$$

- Use the same resistors for R_f and R_i as in step 1. Record the measured value of resistance in Table 20-2.
- Using the measured resistance, compute and record the closed-loop gain of the inverting amplifier.
- Calculate V_{out} using the computed closed-loop gain.
- Connect the circuit shown in Figure 20-4. Set the signal generator for a 500 mV_{pp} sine wave at 1 kHz. The generator should have no dc offset.
- Measure and record the output voltage, V_{out} .
- Measure and record the voltage at pin 2. This point is called a *virtual ground* because of the effect of negative feedback.
- Place a 1.0 kΩ test resistor in series with the generator and R_i . Measure the input resistance of the circuit, R_{in} , based on the voltage drop across the test resistor. In this case, you should observe that the drop across the test resistor is about the same as the drop across R_i .

Floyd Buchla Analog Fundamentals Experiments Answers:

Fundamentals of Analog Circuits Thomas L. Floyd, David Buchla, 1999 *Fundamentals of Analog Circuits* offers comprehensive coverage of a wide relevant array of topics. It integrates theory, practical circuits, and troubleshooting concepts, keeping mathematical details to a minimum. Delving more deeply into coverage of linear integrated circuits than discrete device circuits, the text guides readers through a system of pedagogical tools that both reinforces and challenges their understanding. Opens coverage with a five chapter introduction to discrete devices that include diodes and transistor circuits, plus other topics often omitted in beginning devices texts such as RF amplifiers, transmission lines, transformer coupled amplifiers, direct coupled amplifiers, and power amplifiers. Discusses the operational amplifier with separate chapters on active filters and oscillators. Explores current topics of importance including instrumentation amplifiers, isolation amplifiers, operational transconductance amplifiers, OTA, phase locked loops, A/D and D/A converters, transducers, and more. Indicates current by meters, not arrows, allowing for easy integration into the curriculum of schools using either conventional current flow or electron flow. Features
