

Example:

In the diagram, $CB = 4CN$ and $NA = 5NX$. M is the midpoint of AB . $\overrightarrow{CN} = \mathbf{u}$ and $\overrightarrow{BM} = \mathbf{v}$.

a) Express the following vectors in terms of $\mathbf{u}$ and $\mathbf{v}$.

i) $\overrightarrow{NB}$

ii) $\overrightarrow{NA}$

b) Show that $\overrightarrow{CX} = \frac{2}{5}(4\mathbf{u} + \mathbf{v})$

c) Calculate the value of

i) $\frac{CX}{CM}$

ii) $\frac{\text{area } ACX}{\text{area } ACM}$

Knowledge and Truth in Plato Catherine Rowett,2018 Catherine Rowett presents an in depth study of Plato s Meno Republic and Theaetetus and offers both a coherent argument that the project in which Plato was engaging has been widely misunderstood and misrepresented and detailed new readings of particular thorny issues in the interpretation of these classic texts

International Perspectives on the Teaching and Learning of Geometry in Secondary Schools Patricio Herbst,Ui Hock Cheah,Philippe R. Richard,Keith Jones,2018-04-27 This book presents current perspectives on theoretical and empirical issues related to the teaching and learning of geometry at secondary schools It contains chapters contributing to three main areas A first set of chapters examines mathematical epistemological and curricular perspectives A second set of chapters presents studies on geometry instruction and teacher knowledge and a third set of chapters offers studies on geometry thinking and learning Specific research topics addressed also include teaching practice learning trajectories learning difficulties technological resources instructional design assessments textbook analyses and teacher education in geometry Geometry remains an essential and critical topic in school mathematics As they learn geometry students develop essential mathematical thinking and visualization skills and learn a language that helps them relate to and interact with the physical world Geometry has traditionally been included as a subject of study in secondary mathematics curricula but it has also featured as a resource in out of school problem solving and has been connected to various human activities such as sports games and artwork Furthermore geometry often plays a role in teacher preparation undergraduate mathematics and at the workplace New technologies including dynamic geometry

software computer assisted design software and geometric positioning systems have provided more resources for teachers to design environments and tasks in which students can learn and use geometry In this context research on the teaching and learning of geometry will continue to be a key element on the research agendas of mathematics educators as researchers continue to look for ways to enhance student learning and to understand student thinking and teachers decision making

Redefining Geometrical Exactness Henk J.M. Bos,2012-12-06 In his *Geometrie* of 1637 Descartes achieved a monumental innovation of mathematical techniques by introducing what is now called analytic geometry Yet the key question of the book was foundational rather than technical When are geometrical objects known with such clarity and distinctness as befits the exact science of geometry Classically the answer was sought in procedures of geometrical construction in particular by ruler and compass but the introduction of new algebraic techniques made these procedures insufficient In this detailed study spanning essentially the period from the first printed edition of Pappus Collection 1588 in Latin translation and Descartes death in 1650 Bos explores the current ideas about construction and geometrical exactness noting that by the time Descartes entered the field the incursion of algebraic techniques combined with an increasing uncertainty about the proper means of geometrical problem solving had produced a certain impasse Hethen analyses how Descartes transformed geometry by a redefinition of exactness and by a demarcation of geometry s proper subject and procedures in such a way as to incorporate the use of algebraic methods without destroying the true nature of geometry Although mathematicians later essentially discarded Descartes methodological convictions his influence was profound and pervasive Bos insistence on the foundational aspects of the *Geometrie* provides new insights both in the genesis of Descartes masterpiece and in its significance for the development of the conceptions of mathematical exactness Computer Graphics and Geometric Modeling David Salomon,2012-12-06 Joseph Louis Lagrange 1736 1813 one of the greatest mathematicians of the 18th century made important contributions to the theory of numbers and to analytical and celestial mechanics His most important work is *Mecanique Analytique* 1788 the textbook on which all subsequent work in this field is based A contemporany reader is

surprised to find no diagrams or figures of any kind in this book on mechanics This reflects one extreme approach to graphics namely considering it unimportant or even detracting as a teaching tool and not using it Today of course this approach is unthinkable Graphics especially computer graphics is commonly used in texts advertisements and movies to illustrate concepts to emphasize points being discussed and to entertain Our approach to graphics has been completely reversed since the days of La grange and it seems that much of this change is due to the use of computers Computer graphics today is a mature successful and growing field It is used by many people for many purposes and it is enjoyed by even more people One criterion for the maturity of a field of study is its size When a certain discipline becomes so big that no one person can keep all of it in their head we say that that discipline has matured or has come of age This is what happened to computer graphics in the last decade or so

Geometric Methods in Physics XLI Piotr Kielanowski, Alina Dobrogowska, David Fernández, Tomasz Goliński, 2025-08-25 This volume collects papers based on lectures given at the XLI Workshop on Geometric Methods in Physics held in Bia ystok Poland in July 2024 as well as extended abstracts of minicourses presented during the XIII School on Geometry and Physics These chapters provide readers an overview of cutting edge research in quantum field theories infinite dimensional groups integrable systems noncommutative geometry and a wide variety of other areas Specific topics include Graded structures Lie algebra structures Quasicrystals Sigma models Barycentric algebras Nijenhuis geometry Geometric Methods in Physics XLI will be a valuable resource for mathematicians and physicists interested in recent developments at the intersection of these areas

Socrates Gregory Vlastos, 1991-04-11 This long awaited study of the most enigmatic figure of Greek philosophy reclaims Socrates ground breaking originality Written by a leading historian of Greek thought it argues for a Socrates who though long overshadowed by his successors Plato and Aristotle marked the true turning point in Greek philosophy religion and ethics The quest for the historical figure focuses on the Socrates of Plato s earlier dialogues setting him in sharp contrast to that other Socrates of later dialogues where he is used as a mouthpiece for Plato s often anti Socratic doctrine At the heart of the book is the paradoxical nature of Socratic thought But the paradoxes are explained not explained away The book highlights the tensions in the Socratic search for the answer to the question How should we live Conceived as a divine mandate the search is carried out through elenctic argument and dominated by an uncompromising rationalism The magnetic quality of Socrates personality is allowed to emerge throughout the book Clearly and forcefully written philosophically sophisticated but entirely accessible to non specialists this book will be of major importance and interest to all those studying ancient philosophy and the history of Western thought
