Born to Fail?: Social Mobility: A Working Class View Sonia Blandford, 2017-10-02 Sonia Blandford CEO of award winning charity Achievement for All writes brilliantly and honestly about the facing up to the realities of the white working class and how to address social mobility from the inside No one in the UK is better placed than Sonia to write about the struggles of white working class pupils in our schools She grew up on the Allied Estate in Hounslow and was the first member of her family to pursue education beyond the age of 14 and was also the first to attend university Sonia lost her mother when she took an accidental overdose when she couldn't read the doctor's prescription This tragic failing served as one of the inspirations for her to set up the award winning Achievement for All organisation who work with thousands of schools to help close the attainment gap Born to Fail tackles head on issues such as why education often doesn't matter to the working class how education has failed to deliver for them the importance of self belief action and confidence and how the Early Years is the crucial time to build success from the start

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that

succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
