Steering System Operation

The steering system is a closed-centered, non-load reactive system that provides full time steering control. The system is fully fluid linked with no mechanical connections between any of the main steering components.

The steering system consists of four main components:

- Hydraulic pump
- Priority valve
- Steering valve
- Steering cylinders

The hydraulic pump draws oil through a suction screen from the reservoir. Outlet flow from the pump flows to the priority valve. The priority valve supplies flow, on demand, to steering valve.

When the steering wheel is turned, the steering valve routes oil flow to the cylinders. Return flow from the steering cylinders
