

Application of Johns Hopkins Nursing Evidence-Based Practice Model

✓ Exclusively available on IvyPanda

Introduction

Evidence-based practice (EBP) is essential in providing improved healthcare among practitioners and patients. It is an approach in healthcare aimed at efficient decision-making that entails undertaking research, using clinical expertise, and evaluating patients' preferences (Throne, 2021). The information used to guide healthcare decisions draws from research studies conducted through scientific methods, findings from controlled trials, data from similar cases, and the opinions of other experts. Patient preferences and clinical expertise also build on the available research about the problem. Non-researched evidence alternatives can include expert ideas and scientific principles, which guide healthcare decisions if requisite evidence is lacking or limited. Research findings support EBP frameworks and demonstrate their criticality in analyzing and developing an effective writing development plan.

Simply put, EBP is a form of healthcare provision that incorporates scientific evidence. EBP programs minimize costs and increase the efficiency and effectiveness of service delivery to patients (Friesen et al., 2017). This approach starts with generating information or knowledge about the subject in question, disseminating the information to the relevant stakeholders, and finally, adoption. Healthcare professionals draft a PICOT (P-Population/Person/Problem, I-Intervention, C-comparison, O-Outcome, and T-Timeframe) template to develop the clinical query that needs critical research.

A PICOT model is a system by which healthcare professionals seek answers to the problem. It must be concise and clear to provide evidence-based results (Throne, 2021). This essay will apply one EBP framework to analyze personal continued development and improvement of writing skills. The following PICOT question will guide this analysis: "For my professional role of scholar (P), will a writing skills development plan based on the Johns Hopkins Nursing Evidence-Based Practice Model (I) improve
