	WHAT I KNOW	WHAT I LEARNED
7.1 Why is it important to study cells?	Current Science: Cells make up living things.	Current Science: Cells are the basic units of structure and function in all living things. Cells work to maintain homeostasis. Specialized cells carry out particular functions, such as photosynthesis and energy conversion.
7.2 How do cell structures enable a cell to carry out basic life processes?	Current Science: A cell is made up of cytoplasm that is surrounded by a cell membrane and carries out the basic life processes.	Current Science: Every structure and organelle in a cell carries out certain processes, such as making or storing substances, that help the cell stay alive.
7.3 How does a cell transport materials across the cell membrane?	Current Science: Molecules must cross the cell membrane to enter or leave a cell.	Current Science: A cell can transport materials across the membrane through passive transport, which does not require energy. A cell can move materials by active transport, which needs energy.
7.4 How does a cell maintain homeostasis, both within itself and as part of a multicellular organism?	Current Science: Cells are able to maintain homeostasis.	Current Science: Cells, both by themselves and as multicellular organisms, maintain homeostasis by growing, responding to the environment, transforming energy, and reproducing.
