

1. A right triangle with sides 3 cm, 4 cm and 5 cm is rotated the side of 3 cm to form a cone. The volume of the cone so formed is:

- A. $12\pi \text{ cm}^3$
- B. $15\pi \text{ cm}^3$
- C. $16\pi \text{ cm}^3$
- D. $20\pi \text{ cm}^3$

Answer: Option A

Explanation:

Clearly, we have $r = 3 \text{ cm}$ and $h = 4 \text{ cm}$.

$$\therefore \text{Volume} = \frac{1}{3}\pi r^2 h = \left(\frac{1}{3} \times \pi \times 3^2 \times 4 \right) \text{cm}^3 = 12\pi \text{ cm}^3.$$

Formation Testing Wilson C. Chin, Yanmin Zhou, Yongren Feng, Qiang Yu, 2015-11-20 Traditional well logging methods such as resistivity acoustic nuclear and NMR provide indirect information related to fluid and formation properties The formation tester offered in wireline and MWD LWD operations is different It collects actual downhole fluid samples for surface analysis and through pressure transient analysis provides direct measurements for pore pressure mobility permeability and anisotropy These are vital to real time drilling safety geosteering hydraulic fracturing and economic analysis Methods for formation testing analysis while commercially important and accounting for a substantial part of service company profits however are shrouded in secrecy Unfortunately many are poorly constructed and because details are not available industry researchers are not able to improve upon them This new book explains conventional models and develops new powerful algorithms for double drawdown and advanced phase delay early time analysis importantly it is now possible to predict both horizontal and vertical permeabilities plus pore pressure within seconds of well logging in very low mobility reservoirs Other subjects including inertial Forchheimer effects in contamination modeling and time dependent flowline volumes are also developed All of the methods are explained in complete detail Equations are offered for users to incorporate in their own models but convenient easy to use software is available for those needing immediate answers The leading author is a well known petrophysicist with hands on experience at Schlumberger Halliburton BP Exploration and other companies His work is used commercially at major oil service companies and important extensions to his formation testing models have been supported by prestigious grants from the United States Department of Energy His new collaboration with China National Offshore Oil Corporation marks an important turning point where advanced simulation models and hardware are evolving side by side to define a new generation of formation testing logging instruments The present book provides more than formulations and solutions it offers a close look at formation tester development behind the scenes as the China National Offshore Oil Corporation opens up its research engineering and manufacturing facilities through a collection of interesting photographs to show how formation testing tools are developed from start to finish *Annual Catalogue* Massachusetts Institute of Technology, 1892 ACT Prep 2024 For Dummies with Online Practice Lisa Zimmer Hatch, Scott A.
