Handbook on Characterization of Biomass, Biowaste and Related By-products Ange Nzihou, 2020-02-17. This book provides authoritative information techniques and data necessary for the appropriate understanding of biomass and biowaste understood as contaminated biomass composition and behaviour while processed in various conditions and technologies. Numerous techniques for characterizing biomass biowaste and by product streams exist in literature. However there lacks a reference book where these techniques are gathered in a single book although such information is in increasingly high demand. This handbook provides a wealth of characterization methods protocols standards databases and references relevant to various biomass biowaste materials and by products. It specifically addresses sampling and preconditioning methods extraction techniques of elements and molecules as well as biochemical mechanical and thermal characterization methods. Furthermore advanced and innovative methods under development are highlighted. The characterization will allow the analysis identification and quantification of molecules and species including biomass feedstocks and related conversion products. The characterization will also provide insight into physical mechanical and thermal properties of biomass and biowaste as well as the resulting by products. **Handbook of Pharmaceutical Excipients** Raymond C. Rowe, Paul J. Sheskey, Paul J. Weller, 2003. Describes the chemical and physical properties of pharmaceutical excipients.
