Reed, 2017-03-08 This volume reaches beyond the controversy surrounding the teaching and learning of evolution in the United States specifically in regard to the culture politics and beliefs found in the Southeast The editors argue that despite a deep history of conflict in the region surrounding evolution there is a wealth of evolution research taking place from biodiversity in species to cultural evolution and human development In fact scientists educators and researchers from around the United States have found their niche in the South where biodiversity is high culture runs deep and the pace is just a little bit slower      **Nature of Science in Science**

Berube, 2010-06-01 American science education is in trouble As the

United States continues to lag behind other nations in science achievement the question is asked how can we better get our students excited and inspired by science This is the science teacher s duty The irony of the education profession is that some of the most important aspects of it are the hardest to measure and replicate The things that matter most can be the hardest to quantify Some teachers can know the different learning styles intelligences and brain preferences of their students They can know best practices of how to deliver instruction They can do all these things and more but still not convey imagination and passion for science to their students But some science teachers do inspire These special teachers seem to possess something the others don t but what is it Exceptional science teachers make us feel better about ourselves through their teaching of science and bring us to a higher quality of life as a result while some science teachers can be the leading researchers in their fields yet leave us flat What is the recipe for this unique special teacher And why is it so hard to explain and describe The objective of this book is to uncover these aspects of teaching that are so hard to measure and quantify This is achieved through interviewing people who are either current or retired teachers or who were positively affected by a teacher and also through case studies of exceptional teachers in order to quantify and explain the exact traits and personality quirks of these exceptional people The contribution to the field of education this book hopes to achieve is the examination of

the question why do some teachers have that X factor what exactly is it and how can we all have it      **Science Teacher Preparation in Content-Based Second Language Acquisition** Alandeom W. **Going Back to Our Future II** Jon Pedersen,Kevin D. Finson,Barbara S. Spector,2015-08-01 Who were the pioneers in science education and what motivated them to do what they did This book is the second volume of an attempt to capture and record some of the answers to these questions either from the pioneers themselves or from those persons who worked most closely with them As with the first volume we have attempted to include as many pioneers as possible but we know that there are still many that are not included in this or the previous volume As we have posed questions rummaged through files and oft neglected books and probed the memories of many individuals we have come to realize our list of true pioneers is ever growing As we consider our list of pioneers we know that there are names on the list that most of us readily recognize We

also fully realize that there are names of whom few of us have heard yet who were significant in their roles as mentors or idea development and teaching We continue to be impressed with our science education family tree ever branching out to more individuals and connections The stories in this volume continue to demonstrate how vital this network was in supporting the individual pioneers during their journey in difficult times and continues to be for those of us today in our own enterprise
