Algorithm of Automated Optimal Design Gerald T. Liroy, 1985 In this design project an elastic drive belt system is optimized using an algorithm of automated optional design AOD First some basic background information on AOD and elastic drive belt systems is reviewed An elastic drive belt system configuration is defined mathematically formulated and optimized The mathematical formulation including a set of constraints is completely derived It is set up to be as general as possible so that it may be applied to a wide variety of different problems In several places the formulation uses the recommendations of an elastic drive belt manufacturer for a good design A sample design problem is optimized using the AOD P519RE algorithm of AOD The following optimization studies are carried out 1 Minimization of bearing load 2 Maximization of power transmission 3 Minimization of power requirement Standard belt material compounds and thicknesses are considered To illustrate the usefulness of algorithms of AOD an existing hand calculation design method for elastic drive belt systems is demonstrated These two techniques are then compared as design optimization tools It is shown that an algorithm of AOD is superior for this purpose At the conclusion of this project several detailed discussions regarding the work and results are presented The AOD search process derivation of the final equation set significance of the results and other items are analyzed A set of final design recommendations for the sample problem are given and a list of conclusions is presented Abstract     Performance Testing of PK Section V-Ribbed Belts Belt Drive (Automotive) Systems Committee, 2015 The following information covers accessory drive belt testing methods and includes test configurations pulley diameters power loads and guidance for interpreting test data Belt construction definitions are also documented This information has been prepared from existing literature including standards and data supplied by Producers and Users of V ribbed belts This latest revision of SAE J2432 accomplishes the following Revised backside pulley sizes in durability tests to properly replicate real world failure modes Increased belt dryout time in the noise test to accommodate all belt constructions Revise cold temperature tolerance specification to align with the accuracy and calibration limits of the test equipment
