

Lewis Structures – part I

Chem Worksheet 9-4

Name _____

A Lewis structure is a way to represent the **valence electrons** of an atom using dots. These valence electrons are important because they are involved in bonding. The Lewis structure for an atom is formed by writing the element symbol and placing one dot next to the symbol for each valence electron. For example, the Lewis structure for carbon would have four dots surrounding it, while the Lewis structure of chlorine would have seven.

In a molecule atoms are held together with **covalent bonds**. These bonds are formed when pairs of electrons are shared. For example, carbon will bond with four chlorine atoms to form the molecule carbon tetrachloride, CCl_4 . Each bond in the molecule represents a pair of shared electrons and is represented as a dash. The guiding principle behind bonding in atoms is the **octet rule** which states that each element is trying to get a full set of valence electrons. When carbon shares electron pairs with four chlorine atoms it has an octet. Each chlorine atom has three nonbonding pairs of electrons and one bonding pair. This arrangement is favorable because both carbon and the chlorine atoms have an octet of electrons.

Rules for Drawing Lewis Structures

1. Determine the total number of valence electrons.
2. Join all elements with bonds.
3. Arrange remaining electrons to follow octet rule. Use multiple bonds if necessary.

Symbol	Name	Electrons
—	single bond	2
=	double bond	4
≡	triple bond	6

example

Draw the Lewis structure for phosphorus trichloride, PCl_3 .

- determine total number of valence electrons: $5 + 3(7) = 26$

the group number indicates the number of valence electrons

- join all elements with single bonds:

the first element listed in the formula usually goes in the middle

- add remaining electrons following the octet rule:

the 20 remaining valence electrons are placed around atoms to give each an octet

Draw Lewis structures for each of the following.

1. nitrogen trifluoride, NF_3
2. hydrogen sulfide, H_2S
3. fluorine, F_2
5. sulfur dioxide, SO_2
6. oxygen, O_2
7. sulfur difluoride, SF_2
8. boron trihydride, BH_3
9. chloroform, CHCl_3
10. carbon disulfide, CS_2

11. beryllium chloride, BeCl_2
12. hydrogen cyanide, HCN
13. acetylene, C_2H_2
14. silicon dioxide, SiO_2
15. hydrogen peroxide, H_2O_2
16. sulfate, SO_4^{2-} **account for 2 additional electrons**
17. methanol, CH_3OH
18. nitrate, NO_3^- **account for 1 additional electron**
20. formic acid, CH_2O

Dewey,2013-06-29 Fluorescence spectroscopy has traditionally found wide application in bio chemistry and cell biology Since there are relatively few naturally occurring fluorescent biomolecules fluorescence spectroscopy offers a combination of great specificity and sensitivity Historically these features have been ex ploited with great success utilizing both intrinsic and extrinsic probes Re cent applications have built upon these traditional strengths and have re sulted in the development of new instrumental techniques novel and convenient fluorescent probes and a deeper theoretical understanding of fundamental processes Frequently fluorescence techniques are tailored to attack a specific biological problem These new methods in turn produce new physical situations and phenomena which are often of interest to the physical chemist Thus progress in one area stimulates renewed interest in other areas The goal of this book is to provide detailed monographs on the use of fluorescence to investigate problems at the forefront of biochemistry and cell biology This book is not meant to be a comprehensive survey but rather to highlight areas of recent developments It is designed to be readable to the novice and yet provide sufficient detail for the expert to keep abreast of recent developments The book is

organized so that it proceeds from simple biochemical systems to more complex cell biological ones Chapter I on fluorescence quenching of biological structures is a good introductory chapter It introduces a number of elementary concepts and discusses applications to proteins and biomembranes *American Men & Women of Science* ,2009 *The Druggists' Circular and Chemical Gazette* ,1898 Includes Red book price list section title varies slightly issued semiannually 1897 1906 **Introduction to Green Chemistry** Albert Matlack,2010-04-05 The book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Longer Wear and Population and the Environment This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society Copiously illustrated with over 800 figures this second edition provides an update from the frontiers of the field
