

Figure S9.2 Investor's profit in Problem 9.2

Problem 9.3.

An investor sells a European call option with strike price of K and maturity T and buys a put with the same strike price and maturity. Describe the investor's position.

The payoff to the investor is

$$-\max(S_T - K, 0) + \max(K - S_T, 0)$$

This is $K - S_T$ in all circumstances. The investor's position is the same as a short position in a forward contract with delivery price K .

Problem 9.4.

Explain why margins are required when clients write options but not when they buy options.

When an investor buys an option, cash must be paid up front. There is no possibility of future liabilities and therefore no need for a margin account. When an investor sells an option, there are potential future liabilities. To protect against the risk of a default, margins are required.

Problem 9.5.

A stock option is on a February, May, August, and November cycle. What options trade on (a) April 1 and (b) May 30?

On April 1 options trade with expiration months of April, May, August, and November. On May 30 options trade with expiration months of June, July, August, and November.

Problem 9.6.

A company declares a 2-for-1 stock split. Explain how the terms change for a call option with a strike price of \$60.

John Hull Solutions Manual 8th

AN Whitehead

John Hull Solutions Manual 8th:

Immerse yourself in heartwarming tales of love and emotion with Crafted by is touching creation, **John Hull Solutions Manual 8th** .
