Mercury Rising: John Glenn, John Kennedy, and the New Battleground of the Cold War Jeff Shesol, 2021-06-01. A riveting history of the epic orbital flight that put America back into the space race. If the United States couldn't catch up to the Soviets in space, how could it compete with them on Earth? That was the question facing John F. Kennedy at the height of the Cold War, a perilous time when the Soviet Union built the wall in

Berlin tested nuclear bombs more destructive than any in history and beat the United States to every major milestone in space. The race to the heavens seemed a race for survival and America was losing. On February 20, 1962, when John Glenn blasted into orbit aboard Friendship 7, his mission was not only to circle the planet; it was to calm the fears of the free world and renew America's sense of self-belief. *Mercury Rising* recreates the tension and excitement of a flight that shifted the momentum of the space race and put the United States on the path to the moon. Drawing on new archival sources, personal interviews, and previously unpublished notes by Glenn himself, *Mercury Rising* reveals how the astronaut's heroics lifted the nation's hopes in what Kennedy called the hour of maximum danger.

On a Mission Valerie Neal, 2025-10-28 The definitive history of all 61 American women astronauts that's perfect for fans of *The Six*: eager for more, Sally Ride became a household name as the first American woman in space, but scores of equally impressive women have also left their mark in space. *On a Mission: The Smithsonian History of US Women Astronauts* spans 45 years and 61 astronauts to share the epic journeys of women who made space for themselves in a male-dominated field. Valerie Neal, emerita curator in the Department of Space History at the Smithsonian's National Air and Space Museum, offers a culturally insightful history of the experiences of women astronauts, the challenges they've faced, and their distinctive stories. Collectively, they've completed more than 100 space shuttle missions and more than 30 long-duration stays on the International Space Station and Russian Space Station Mir, and they continue to prove themselves in present-day space exploration efforts. The book includes 50 black and white photographs to complement the historical account. With its sweeping look from the first women astronauts to Christina Hammock Koch, assigned to the first crewed Artemis mission around the Moon, there is no comparably thorough book on America's women astronauts. *On a Mission* is an inspiring tribute to unsung women's history.

Functional Future for Bibliographic Control Shawne D. Miksa, 2017-07-05 The quest to evolve bibliographic control to an equal or greater standing within the current information environment is ongoing. As information organizers, we are working in a time where information and communication technology (ICT) has pushed our status quo to its limits, and where innovation often needs the pressure of do or die in order to get started. The year 2010 was designated as the Year of Cataloging Research, and we made progress on studying the challenges facing metadata and information organization practices. However, one year of research is merely a drop in the bucket, especially given the results of the Resource and Description and Access (RDA) National Test and the Library of Congress decision to investigate the possibility of transitioning the MARC21 format. This book addresses how information professionals can create a functional environment in which we move beyond just representing information resources and into an environment that both represents and connects at a deeper level. Most importantly, it offers insight on transitioning into new communities of practice and awareness by reassessing our purpose, recharting our efforts, reasserting our expertise in the areas that information organizers have traditionally claimed but are losing due to stagnation and lack of vision. This book was published as a double special issue of the *Journal of Library Metadata*.
