

A meteorologist believes that there is a relationship between the height above sea level, h m, and the air temperature, $t^{\circ}\text{C}$. Data is collected at the same time from 9 different places on the same mountain. The data is summarised in the table below.

h	1400	1100	260	840	900	550	1230	100	770
t	3	10	20	9	10	13	5	24	16

[You may assume that $\sum h = 7150$, $\sum t = 110$, $\sum h^2 = 7\,171\,500$, $\sum t^2 = 1716$, $\sum th = 64\,980$ and $S_r = 371.56$]

- (a) Calculate S_{th} and S_{hh} . Give your answers to 3 significant figures.

(3)
- (b) Calculate the product moment correlation coefficient for this data.

(2)
- (c) State whether or not your value supports the use of a regression equation to predict the air temperature at different heights on this mountain. Give a reason for your answer.

(1)
- (d) Find the equation of the regression line of t on h giving your answer in the form $t = a + bh$.

(4)
- (e) Interpret the value of b .

(1)
- (f) Estimate the difference in air temperature between a height of 500m and a height of 1000 m.

Automata Theory, Languages of Machines and Computability Shivam Saxena, 2018-02-05 The book is all about the automata formal language theory and computability Automata theory plays important roles in compilers text processing programming languages hardware designs and artificial intelligence and is the core base of computer science studies The intent is to make automata theory interesting and challenging and break the myth of being a tough topic For that matter topics are covered in an easy to understand manner with the help of elaborative and well described examples For topics which are little complex and fuzzy to understand strategy adopted is to connect the topic with the everyday problems we encounter in order to develop a connective understanding of the topic and get a clear view of the topic Exercise questions are provided with the answers to understand the solution easily The prospective audience for the book are computer science engineering students Computer science scholars and people preparing for competitive exams like GATE UGC NET etc

Climate vulnerability assessment methodology Lotten Wiréhn, 2017-11-27 Food security and climate change mitigation are crucial missions for the agricultural sector and for global work on sustainable development Concurrently agricultural production is directly dependent on climatic conditions making climate change adaptation strategies essential for the agricultural sector There is consequently a need for researchers planners and practitioners to better understand how why and to what extent agriculture is vulnerable to climate change Such analyses involve challenges in relation to the complex social ecological character of the agricultural system and to the multiple conceptualizations and approaches used in analysing vulnerability The aim of this thesis is to identify how vulnerability assessments can be used to represent climate related vulnerability in Nordic agriculture in order to advance the methodological development of indicator based and geographic visualization methods The following research questions are addressed i How can agricultural vulnerability to climate change and variability in the Nordic countries be characterized ii How do selections definitions and emphases of indicators influence how vulnerability is assessed iii How do estimates of vulnerability vary depending on the methods used in assessments iv How can geographic visualization be applied in integrated vulnerability assessments This thesis analyses and applies various vulnerability assessment approaches in the context of Nordic agriculture This thesis demonstrates that various methods for composing vulnerability indices result in significantly different outcomes despite using the same set of indicators A conceptual framework for geographic visualization approaches to vulnerability assessments was developed for the purpose of creating transparent and interactive assessments regarding the indicating variables methods and assumptions applied i e opening up the black box of composite indices This framework served as the foundation for developing the AgroExplore geographic visualization tool The tool enables the user to interactively select categorize and weight indicators as well as to explore the data and the spatial patterns of the indicators and indices AgroExplore was used in focus group settings with experts in the Swedish agricultural sector The visualization supported dialogue results confirm the difficulty of

selecting and constructing indicators including different perceptions of what indicators actually indicate the assumption of linear relationships between the indicators and vulnerability and consequently that the direction of the relationship is predefined for each indicator This thesis further points at the inherent complexity of agricultural challenges and opportunities in the context of climate change as such It is specifically emphasized that agricultural adaptation policies and measures involve trade offs between various environmental and socio economic objectives and that their implementation could furthermore entail unintended consequences i e potential maladaptive outcomes Nevertheless it proved difficult to validate indicators due to e g matters of scale and data availability While heavy precipitation and other extreme weather events are perceived as the most relevant drivers of climate vulnerability by the agricultural experts participating in this study statistical analyses of historical data identified few significant relationships between crop yield losses and heavy precipitation In conclusion this thesis contributes to the method development of composite indices and indicator based vulnerability assessment A key conclusion is that assessments are method dependent and that indicator selection is related to aspects such as the system s spatial scale and location as well as to indicator thresholds and defined relationships with vulnerability recognizing the contextual dependency of agricultural vulnerability Consequently given the practicality of indicator based methods I stress with this thesis that future vulnerability studies must take into account and be transparent about the principles and limitations of indicator based assessment methods in order to ensure their usefulness validity and relevance for guiding adaptation strategies

Concepts and Values in Biodiversity Dirk Lanzerath, Minou Friele, 2014-01-23 Biodiversity may refer to the diversity of genes species or ecosystems in general These varying concepts of biodiversity occasionally lead to conflicts among researchers and policy makers as each of them require a customized type of protection strategy This book addresses the questions surrounding the merits of conserving an existing situation evolutionary development or the intentional substitution of one genome species or ecosystem for another Any practical steps towards the protection of biodiversity demand a definition of that which is to be protected and in turn the motivations for protecting biodiversity Is biodiversity a necessary model which is also useful or does it carry intrinsic value Debates like this are particularly complex when interested parties address it from different conceptual and moral perspectives Comprised of three parts each complemented by a short introductory paragraph this collection presents a variety of approaches to this challenge The chapters cover the

perspectives of environmental scientists with expertise in evolutionary environmental biology systematic zoology and botany as well as those of researchers with expertise in philosophy ethics politics law and economics This combination facilitates a truly interdisciplinary debate by highlighting hitherto unacknowledged implications that inform current academic and political debates on biodiversity and its protection The book should be of interest to students and researchers of environment studies biodiversity environmental philosophy ethics and management **Cambridge International AS and A Level**
