Cristina Vega,2016-05-10 This book presents advanced expression technologies for the production of protein complexes Since complexes lie at the heart of modern biology the expression purification and characterization of large amounts of high quality protein complexes is crucial for the fields of biomedicine biotechnology and structural biology From co expression in E coli yeast mammalian and insect cells to complex reconstitution from individual subunits this book offers useful insights and guidance for successful protein expressionists Across several sections readers will discover existing opportunities for the production of protein complexes in bacterial systems including membrane proteins and cell free co expression methylotrophic and non methylotrophic yeasts protozoa Leishmania terantolae and Dictyostelium discoideum baculovirus infected insect cells mammalian cells plants and algae Complex reconstitution from individually purified subunits or subcomplexes is discussed as a complementary strategy A last section introduces briefly some of the biophysical and structural characterization techniques for macromolecular complexes using state of the art solution scattering and nuclear magnetic resonance This work is a guided tour over some of the most powerful and successful protein expression technologies with a focus on co expression and high throughput applications It is addressed to everyone interested in the production and characterization of macromolecular complexes from university students who want an accessible description of the major co expression systems to researchers in biomedicine and the life sciences seeking for an up to date survey of available technologies     *Sexual Behaviours and Relationships of Autistics* Matthew Bennett,Emma Goodall,2021-01-31 This SpringerBrief provides readers with a comprehensive snapshot of contemporary research about autistics and their experiences and insights of sexual behaviours and interests The authors use a scoping review approach to canvass the diverse literature on this topic This approach shows many gaps in scholarly understanding about autistics and their experiences and insights of sexual interests and behaviours Some of the gaps relate to sex education gender dysphoria and gender reassignment surgery pregnancy and childbirth and domestic violence

experiences of autistics The book addresses these gaps and provides explanations and recommendations for further research

**Circadian Rhythms in Bacteria and Microbiomes** Carl Hirschbie Johnson, Michael Joseph Rust, 2021-06-21 This book addresses multiple aspects of biological clocks in prokaryotes The first part of the book deals with the circadian clock system in cyanobacteria i e the pioneer of bacterial clocks Starting with the history and background of cyanobacteria and circadian rhythms in microorganisms the topics range from the molecular basis structure and evolution of the circadian clock to modelling approaches Kai systems in cyanobacteria and biotechnological applications In the second part emergent timekeeping properties of bacteria in microbiomes and bacteria other than cyanobacteria are discussed Since the discovery of circadian rhythms in cyanobacteria in the late 1980s the field has exploded with new information The cyanobacterial model system for studying circadian rhythms *Synechococcus elongatus* has allowed a detailed genetic dissection of the bacterial clock due to state of the art methods in molecular structural and evolutionary biology Cutting edge research spanning from cyanobacteria and circadian phenomena in other kinds of bacteria to microbiomes has now given the field another major boost This book is aimed at junior and senior researchers alike Students or researchers new to the field of biological clocks in prokaryotes will get a comprehensive overview while more experienced researchers will get an update on the latest developments Report Canada.
