Díaz-Delgado, Sander Múcher, 2019-12-18 Unmanned aerial vehicles UAV have already become an affordable and cost efficient tool to quickly map a targeted area for many emerging applications in the arena of ecological monitoring and biodiversity conservation Managers owners companies and scientists are using professional drones equipped with high resolution visible multispectral or thermal cameras to assess the state of ecosystems the effect of disturbances or the dynamics and changes within biological communities inter alia We are now at a tipping point on the use of drones for these type of applications over natural areas UAV missions are increasing but most of them are testing applicability It is time now to move to frequent revisiting missions aiding in the retrieval of important biophysical parameters in ecosystems or mapping species distributions This Special Issue shows UAV applications contributing to a better understanding of biodiversity and ecosystem status threats changes and trends It documents the enhancement of knowledge in ecological integrity parameters mapping long term ecological monitoring based on drones mapping of alien species spread and distribution upscaling

ecological variables from drone to satellite images methods and approaches rapid risk and disturbance assessment using drones mapping albedo with UAVs wildlife tracking bird colony and chimpanzee nest mapping habitat mapping and monitoring and a review on drones for conservation in protected areas Federal Communications Commission Reports
