Diversity equity and inclusion DEI are critical pillars for transforming mathematics and science education As classrooms diversify the need to address systemic barriers and create inclusive learning environments becomes more urgent Cases on DEI in STEM education highlight the real world challenges and strategies educators face in promoting equitable access to learning opportunities dismantling biases and empowering students from historically marginalized communities Further exploration may reveal powerful teaching tools and catalyze reflective practice and institutional change encouraging educators to critically examine their roles in shaping a more inclusive future in math and science Cases on Diversity Equity and Inclusion for Mathematics and Science Education explores key issues and concepts related to diversity equity and inclusion in mathematics and science classrooms It offers solutions and successful strategies for teaching and learning in mathematics and science This book covers topics such as inclusive classrooms K 12 education pre service teaching and is a useful resource for educators sociologists academicians researchers and scientists Recent Research On Domination Related Parameters Dr. D. D. Pandya, 2021-09-05

In this thesis we have discussed variants of domination like vertex covering Independent domination K domination K dependent set K dependent K domination Total domination Extended total domination K tuple domination Total K domination Restrained domination and Total restrained domination We have characterized edges whose removal affects or does not affect these variants We have also discussed changing and unchanging of these variants in terms of edge addition between two non adjacent vertices From history we can see that much work has been done for critical graphs but existing work is related to all edges of graph But for application point of view sometimes we require to delete or add any particular edge So our work is related to any particular edge but it is applicable for all graphs When existing work

for critical graphs is applicable for any edge but in some particular graph In this way our results carry more important when any particular edge is to be focused We have also discussed bondage number for some variants Our results are related to relation between vertices and edges whose removal affects all these variants Many research papers have been published for criticalness of graph with respect to vertex removal So our results may be link between vertices and edge removal It will insist many research scholars to do work in this direction We believe our study will become instrumental in making the relation between edge removal and vertex removal more transparent and effectively We hope our thesis provide row material for other research scholars of engineering field also
