Includes additional examples on engineering applications.

MATLAB for Engineers Karel Perutka, 2011-10-13 The book presents several approaches in the key areas of practice for which the MATLAB software package was used. Topics covered include applications for Motors, Power systems, Robots, Vehicles. The rapid development of technology impacts all areas. Authors of the book chapters who are experts in their field present interesting solutions of their work. The book will familiarize the readers with the solutions and enable the readers to enlarge them by their own research. It will be of great interest to control and electrical engineers and students in the fields of research the book covers.

Introduction to Numerical and Analytical Methods with MATLAB for Engineers and Scientists William Bober, 2013-11-12 This textbook teaches students how to write computer programs on the MATLAB platform and to use many of MATLAB's built-in functions to solve engineering type problems. To students MATLAB's built-in functions are black boxes. By combining a textbook on MATLAB with basic numerical and analytical analysis the mystery of what the black boxes contain is somewhat alleviated. Within each chapter there are exercises related to the topics just covered. The text contains many examples from mechanical, civil, aeronautical and electrical engineering.

Primary MATLAB® for Life Sciences: Guide for Beginners Leonid Burstein, 2013-12-07 This e-book provides readers a short introductory MATLAB course oriented towards various collaborative areas of biotechnology and bioscience. The text concentrates on MATLAB fundamentals and gives examples of its application for various problems in computational biology, molecular biology, biokinetics, biomedicine, bioinformatics and biotechnology. MATLAB is presented with examples and applications to various school level and advanced life science, bioengineering problems from growing populations of microorganisms and population dynamics, reaction kinetics and reagent concentrations, predator-prey models, to data fitting and time series analysis. The book is divided into 6 chapters containing material carefully selected and tailored to teaching several groups of biotechnology students. The topics are presented in a manner that allows readers to proceed sequentially on the strength of the preceding material. Primary MATLAB for Life Sciences: A Guide for Beginners is essentially a concise and comprehensive text that provides an easy grasp and to the point access to the MATLAB tool to the community.
