Elmasri, 1994-07-28 This monograph is devoted to computational morphology particularly to the construction of a two dimensional or a three dimensional closed object boundary through a set of points in arbitrary position By applying techniques from computational geometry and CAGD new results are developed in four stages of the construction process a the gamma neighborhood graph for describing the structure of a set of points b an algorithm for constructing a polygonal or polyhedral boundary based on a c the flintstone scheme as a hierarchy for polygonal and polyhedral approximation and localization d and a Bezier triangle based scheme for the construction of a smooth piecewise cubic boundary Foundations of Rule Learning Johannes Fürnkranz, Dragan Gamberger, Nada Lavrač, 2012-11-06 Rules the clearest most explored and best understood form of knowledge representation are particularly important for data mining as they offer the best tradeoff between human and machine understandability This book presents the fundamentals of rule learning as investigated in classical machine learning and modern data mining It introduces a feature based view as a unifying framework for propositional and relational rule learning thus bridging the gap between attribute value learning and inductive logic programming and providing complete coverage of most important

elements of rule learning. The book can be used as a textbook for teaching machine learning as well as a comprehensive reference to research in the field of inductive rule learning As such it targets students researchers and developers of rule learning algorithms presenting the fundamental rule learning concepts in sufficient breadth and depth to enable the reader to understand develop and apply rule learning techniques to real world data <u>Database and Applications Security</u> Bhavani Thuraisingham, 2005-05-26 This is the first book to provide an in depth coverage of all the developments issues and challenges in secure databases and applications It provides directions for data and application security including securing emerging applications such as bioinformatics stream information processing and peer to peer computing Divided into eight Information Systems: The Connection Of People And Resources For Innovation - A Textbook Cheng K sections Hsu, 2013-01-25 This unique new textbook on Information Systems IS provides an answer to a few basic questions in the field What is the scientific nature of IS How do we design IS in today s connected world What is the relationship between IS and innovation in knowledge economies Whereas mainframe corporate computers tended to dominate the thinking in the 1980s the dominating factor today is personal digital devices that connect the world as one whole IS Network science is emerging to describe these digital connections e g social networking and service science is similarly emerging to describe service value networks This book therefore synthesizes the emerging network science and service science with the classic IS theory resulting in a new set of principles for IS strategic planning It also reviews the standard IS topics of system analysis and database design covering the whole spectrum of databases and all the major methods and techniques of database design The role of IS as a technological innovation in the knowledge economy is also analyzed In doing so new concepts such as basic values of IS systems of IS sustainability of IS IS as a service system IS as a human value network and the hyper network model for innovation by IS are developed **High-Performance Parallel Database Processing and Grid Databases** David Taniar, Clement H. C. Leung, Wenny Rahayu, Sushant Goel, 2008-09-17 The latest techniques and principles of parallel and grid database processing The growth in grid databases coupled with the utility of parallel guery processing presents an important opportunity to understand and utilize high performance parallel database processing within a major database management system DBMS This important new book provides readers with a fundamental understanding of parallelism in data intensive applications and demonstrates how to develop faster capabilities to support them It presents a balanced treatment of the theoretical and practical aspects of high performance databases to demonstrate how parallel query is executed in a DBMS including concepts algorithms analytical models and grid transactions High Performance Parallel Database Processing and Grid Databases serves as a valuable resource for researchers working in parallel databases and for practitioners interested in building a high performance database It is also a much needed self contained textbook for database courses at the advanced undergraduate and graduate levels **Theoretical and Analytical Service-Focused Systems Design and Development** Chiu, Dickson K. W., 2012-06-30 This book provides solutions to these challenges

OOIS 2001 Xingxu Wang, Shushma Patel, Ronald Johnston, 2012-12-06 Welcome to 00lS 01 and Calgary This is the 7th International Conference on Object Oriented Information Systems OOIS that focus on Object Oriented and Web Based Frameworks for Information Systems In the last few years we ve seen significant new development in this field from one off design technologies to reusable frameworks and from web applications to bioinformatic systems We perceive that information processing is one of the most important activities of human beings Object orientation and frameworks have been the main stream technologies for design and implementation of large scale and complex information systems Recent research advances and industrial innovations in information systems modeling and Internet applications have explored the new trends in shifting information system vendors from component and system developers to services providers Users of information systems are increasingly demanding higher performance mobility and personalization in order to realize the dream to access

and obtain necessary information anywhere and anytime The new development requires the investigation of new architectures frameworks processes and inter connectivity of information systems at society organization team and personal levels The 00lS 01 Proceedings has put together a program of 53 papers from leading researchers and practitioners in the field of object technology and information systems **Computational Linguistics and Talking Robots** Roland Hausser, 2011-08-19 The practical task of building a talking robot requires a theory of how natural language communication works Conversely the best way to computationally verify a theory of natural language communication is to demonstrate its functioning concretely in the form of a talking robot the epitome of human machine communication To build an actual robot requires hardware that provides appropriate recognition and action interfaces and because such hardware is hard to develop the approach in this book is theoretical the author presents an artificial cognitive agent with language as a software system called database semantics DBS Because a theoretical approach does not have to deal with the technical difficulties of hardware engineering there is no reason to simplify the system instead the software components of DBS aim at completeness of function and of data coverage in word form recognition syntactic semantic interpretation and inferencing leaving the procedural implementation of elementary concepts for later In this book the author first examines the universals of natural language and explains the Database Semantics approach Then in Part I he examines the following natural language communication issues using external surfaces the cycle of natural language communication memory structure autonomous control and learning In Part II he analyzes the coding of content according to the aspects semantic relations of structure simultaneous amalgamation of content graph theoretical considerations computing perspective in dialogue and computing perspective in text The book ends with a concluding chapter a bibliography and an index The book will be of value to researchers graduate students and engineers in the areas of artificial intelligence and robotics in particular those who deal with natural language processing Ency of Library and Inform Sci 2e V4 (Print) Miriam A.
