Revision Anterior Cruciate Ligament Reconstruction Michael J. Alaia, Kristofer J. Jones, 2022-06-02. Anterior cruciate ligament reconstruction is one of the most common procedures performed in sports medicine centers. However, these procedures can carry a long term failure rate as high as 5-15%, and when these procedures fail, revision is significantly more complex. Considerable factors need to be assessed in patients that are indicated for surgery as revisions carry a higher failure rate and potentially less optimal outcomes and return to sport and activity. These factors include, but are not limited to, the status of the meniscus, overall alignment, graft options, placement of prior implants or tunnels, collateral ligament quality, and whether or not the revision must be staged into two procedures. This text provides a comprehensive case-based presentation of the most efficient and practical treatment algorithms for patients in need of revision ACL repair and reconstruction. Opening chapters discuss the initial patient work up, radiography, surgical indications, graft options, and preoperative considerations and preparations. The main portion of the book then describes both common factors leading to

revision surgery as well as the surgical techniques themselves illustrated via plentiful operative photos and vivid clinical case material The management of osteolysis ligamentous laxity extra articular tenodesis plane correction and meniscus deficiency among others are discussed in detail Special populations such as the pediatric patient the elite athlete and the female athlete are discussed as well Shedding light on this challenging surgical repair Revision Anterior Cruciate Ligament Reconstruction is the go to resource for sports medicine and orthopedic surgeons knee specialists and residents and fellows in these areas
