Synge,2011-03-23 In a sense this is a book for the beginner in mechanics but in another sense it is not From the time we make our first movements crude ideas on force mass and motion take shape in our minds This body of ideas might be reduced to some order at high school as crude ideas of geometry are reduced to order but that is not the educational practice

in North America There is rather an accumulation of miscellaneous facts bearing on mechanics some mathematical and some experimental until a state is reached where the student is in danger of being repelled by the subject as a chaotic jumble which is neither mathematics nor physics This book is intended primarily for students at this stage The authors ambition is to reveal mechanics as an orderly self contained subject It may not be quite so logically clear as pure mathematics but it stands out as a model of clarity among all the theories of deductive science The art of teaching consists largely in isolating difficulties and overcoming them one by one without losing sight of the main problem while attending to the details In mechanics the main problem is the problem of equilibrium or motion under given forces the details are such things as the vector notation the kinematics of a rigid body or the theory of moments of inertia If we rush straight at the main problem we become entangled in the details and must retrace our steps in order to deal with them If on the other hand we decide to settle all details first we are apt to find them uninteresting because we do not see their connection with the main problem A compromise is necessary and in this book the compromise consists of the division into Plane Mechanics Part I and Mechanics in Space Part II

Transcendental Idealism and Metaphysics Daniele De Santis, 2023-10-19 Winner of the Edward Goodwin Ballard Prize as announced at the Society for Phenomenology and Existential Philosophy Meeting on September 27 2024 The book offers a systematic reconstruction of the disagreement between Husserl and Heidegger from the former's point of view but without falling into any form of Husserlian apologetics The main thesis is that Husserl's critique of Heidegger's existential analytics as a form of philosophical anthropology entails a deeper fundamental thesis namely that Heidegger confuses the subject matter of first philosophy the transcendental subject with metaphysics in the Husserlian sense of the expression At stake in Husserl's critique of Heidegger's philosophy in *Being and Time* is the refusal to transcendentalize the irrational aspects of our human existence This second volume focuses on the question of being clarifying the distinction between ontology and metaphysics in Husserl's thought In fact contrary to a long standing and established interpretive tradition according to which Husserl's phenomenology is metaphysically neutral the book shows to what extent Husserl always understood as the ultimate goal of his philosophizing the positive foundation of a metaphysics This volume appeals to students and researchers
