History virologist Michael Oldstone explains the scientific principles of viruses and epidemics while relating the past and
present history of the major and recurring viral threats to human health and how they have influenced human events

Poliomyelitis Matthew Smallman-Raynor,Andrew David Cliff,2006 For parents few infections scored higher than
poliomyelitis on the dread factor from the early years of the twentieth century as each successive wave of the disease outdid
its predecessor in the number of children it crippled and killed But from the 1950s this picture abruptly changed when
preventive vaccines were developed which have brought the disease to the edge of global eradication Part I Epidemic
Emergence 1881 1920 looks at the transition from endemic to epidemic poliomyelitis in Europe and the United States Part II
Global Expansion 1921 55 covers the pre vaccination period of epidemic poliomyelitis at world continental and island scales
Part III Global Retreat 1955 88 focuses upon the control of poliomyelitis by mass vaccination campaigns Part IV Global
Eradication concludes the book by focusing upon the road to eradication to which the Forty first World Health Assembly
committed in 1988 And so at the beginning of a new millennium poliomyelitis looks set to be the first disease since smallpox
in 1979 to be eradicated by direct human intervention with the interruption of wild poliovirus transmission expected in 2005
The evolution of poliomyelitis to global epidemiological significance from the 1920s marks it out as one of the world s major
emergent infections of the twentieth century What causes diseases to wax and wane in time and space is a theme of
contemporary scientific interest as we seek to understand the appearance of new conditions such as Ebola fever Legionnaires
disease and HIV and this book contributes to our comprehension of likely causes
