the Centre de Recerca Matemàtica in Barcelona in spring 2013. Most of them are short articles giving preliminary presentations of new results not yet published in regular research journals. The articles are the result from a direct collaboration among active researchers in the area after working in a dynamic and productive atmosphere. Almost everything that is interesting and important for society is complex here: examples scattered across science are presented in order to illustrate the cross-disciplinary richness of state-of-the-art complex systems research: fracture avalanches and rain showers that mimic earthquakes, highly organized graphs that account for processes in neural networks, metabolic networks, food webs or language models for DNA dynamics or statistical methods to test complexity in the form of structure along many different scales. The mathematics is put to work for the modeling of the real system and the models are kept at a minimum level to allow the understanding of the essentials of the real system. The book is intended for established researchers as well as for PhD and postdoc students who wish to learn more about the latest advances in these active areas of research. **Complex Sciences** Jie Zhou, 2009-06-29. I was invited to join the Organizing Committee of the First International Conference on Complex Sciences: Theory and Applications, Complex 2009, as its ninth member. At that moment, eight distinguished colleagues: General Co-chairs Eugene Stanley and Gaoxi Xiao, Technical Co-chairs János Kertész and Bing Hong Wang, Local Co-chairs Hengshan Wang and Hong An Che, Publicity Team Shi Xiao and Yubo Wang, had spent hundreds of hours pushing the conference half way to its birth. Ever since then, I have been amazed to see hundreds of papers flooding in, reviewed and commented on by the TPC members. Finally, more than 200 contributions were lectured for the proceedings currently in your hands. They include about 200 papers from the main conference selected from more than 320 submissions and about 33 papers from the five collated workshops: Complexity Theory of Art and Music, COART, Causality in Complex Systems, ComplexCCS, Complex Engineering Networks, ComplexEN, Modeling and Analysis of Human Dynamics, MANDYN, Social Physics and its Applications, SPA. Complex sciences are expanding their colonies at such a dazzling speed that it comes literally impossible for any conference to cover all the frontiers. Parallel Computational Fluid Dynamics 2003 Boris Chetverushkin, Jacques Periaux, N. Satofuka, A. Ecer, 2004-05-06. The book is devoted to using of parallel multiprocessor computer systems for numerical simulation of the problems which can be described by the equations of continuum mechanics. Parallel algorithms and software: the problems of meta-computing are discussed in details. Some results of high performance simulation of modern gas dynamic problems, combustion phenomena, plasma physics etc. are presented.
