Recognize that energy is absorbed when a substance changes from a solid to a liquid to a gas, and that energy is released when a substance changes from a gas to a liquid to a solid. Explain the relationship among evaporation, condensation, cooling, and warming.
- 3.4 Explain the relationship among temperature changes in a substance, the amount of heat transferred, the amount (mass) of the substance, and the specific heat of the substance.

Objectives:

- Convert between temperature scales.
- Describe how thermal energy, heat, and temperature are related.
- Explain the significance of specific heat.
