**Climate Change and the Governance of Corporations** Rory Sullivan, Andy

Gouldson, 2020-09-30 Climate change represents the most important environmental challenge of our time Organisations are responding by implementing governance processes and taking action to reduce their own emissions and the emissions from their supply chains and value chains Yet very little is known about how these efforts contribute to reducing greenhouse gas emissions if indeed they make any substantive contribution at all or about how they might be harnessed to deliver more ambitious reductions in emissions This book explains when and where particular forms of governance intervention including internal governance processes and external governance pressures are likely to impact climate change From this analysis it offers practical proposals on the climate policy frameworks that need to be in place to facilitate or accelerate changes in corporate behaviour The book is truly global it focuses on the world's 25 largest retailers including Walmart Tesco Carrefour Sears and Aldi and is based on detailed interviews with senior managers from these corporations and with key global and national NGOs corporate responsibility experts politicians and regulators These interviews provide clear insights into how

external governance pressures and actions public opinion regulation incentives interact with internal governance conditions management systems and processes corporate policies board CEO leadership to change and shape corporate actions on climate change and in turn the climate change impacts of these corporations This book can be used as a core reference for any courses dealing with corporate governance and business strategy in particular those relating to climate change and to environmental management more generally It is also of relevance to business practitioners public policy makers investors and NGOs interested in ensuring that companies play a constructive role in the transition to a low carbon economy

*Out of the Energy Labyrinth* David Howell, Carole Nakhle, 2007-05-25 The planet is under threat And that threat comes from energy So goes the standard argument But according to David Howell and Carole Nakhle this reasoning is wrong In their provocative and original book the authors argue that energy can become a tool for environmental protection that energy and environment are not by definition in conflict with each other and that by pooling energy production and environmental protection ideas energy can be part of a solution rather than the problem This book is firmly grounded in reality given the demands of China India and other developing economies and makes specific proposals a radical rethinking on energy investment strategies massive incentives to develop alternative fuel technologies a ground breaking public awareness strategy to redirect consumers and policy makers to embrace fundamental though essentially painless change in consumption patterns The solutions that Howell and Nakhle offer are unapologetically short term This is because the energy challenges immediately ahead if not handled right could undermine all longer term attempts to limit climate change Their important and novel approach makes this book essential reading for an understanding of today s bewildering environmental debates
