

The Construction of Global Warming and the Politics of Science

David Demeritt

Department of Geography, King's College London

Having outlined a theory of heterogeneous social construction, this article describes the scientific construction of climate change as a global-scale environmental problem caused by the universal physical properties of greenhouse gases. Critics have noted that this reductionist formulation serves a variety of political purposes, but instrumental and interest-based critiques of the use of scientific knowledge tend to ignore the ways in which a politics gets built into science at the upstream end. By retracing the history of climate modeling and of several scientific controversies, I unmask the tacit social and epistemic commitments implied by its specific practices. The specific scientific framing of global climate change has reinforced and been reinforced by the technocratic inclinations of global climate management. The social organization of climate change science and its articulation with the political process raise important questions about trust, uncertainty, and expertise. The article concludes with a discussion of the political brittleness of this dominant science-led and global-scale formulation of the climate change problem and the need for a more reflexive politics of climate change and of scientific knowledge based on active trust. *Key Words:* climate change, social constructionism, social studies of science.

In little more than a decade, global warming has been transformed from an obscure technical concern into a subject of widespread public anxiety and international regulatory interest. Only a dozen years separate the World Meteorological Organization's 1985 Villach conference, at which years of previous scientific research and technical debate crystallised into one of the first widely publicized warnings about an anthropogenically enhanced greenhouse effect due to rising concentrations of carbon dioxide (CO₂) and other radiatively sensitive greenhouse gases (GHGs), from the recent Kyoto Protocol to United Nations Framework Convention on Climate Change (UNFCCC), at which politicians hammered out a package of legally binding targets for reducing the GHG emissions of industrialized countries. The speed with which scientific knowledge of climate change has been translated into an international diplomatic consensus is remarkable, if not unprecedented. It is testimony to the authority of science to provide legitimacy for political action.

However, science cannot be given all the credit for spurring the rapid political response to climate change. The 1988 heat wave and drought in North America were arguably as influential in fostering public concern as any of the more formal scientific advice, such as NASA scientist James Hansen's infamous 1988 declaration to Congress that he was "99 percent sure" that global warming was already happening (quoted in Ungar 1992, 491–92; cf. Mazur and Lee 1993). The relationships among

the diverse expert and lay understandings of climate change are complex, as are their connections to climate change politics and policy-formation (Jasanoff and Wynne 1998).

A variety of powerful political interests served as midwives to the birth in the mid- to late 1980s of climate change as a pressing global environmental problem. Since the leading cause of increasing atmospheric GHG concentrations is fossil fuel consumption, which is rapidly increasing worldwide, the politics of climate change are closely intertwined with the politics of energy (Boehmer-Christiansen 1990; Levy and Egan 1998; Newell and Paterson 1998; Rowlands 2000) and the politics of development (Rajan 1997; Grubb, Vrolijk, and Brack 1999; Sachs 1999).

Political analysis has focused primarily on the powerful interests competing to set climate change policy. Political scientists and geographers have charted the fate of local climate change mitigation and energy conservation initiatives (Hinchliffe 1996; Lambright, Changnon, and Harvey 1996; Bulkeley 1997; Collier 1997) and intra-state struggles to fashion coherent national energy and environmental policy responses to global warming (Hatch 1993; O'Riordan and Jager 1996; Sewell 1996; Pleune 1997; Rajan 1997). Students of international relations have studied the geopolitics of negotiating international environmental agreements on climate change (Hecht and Tirpak 1995; Rowlands 1995; Paterson 1996; Yearley 1996; Grubb, Vrolijk, and Brack 1999). Climate Change Impacts in India Chaitanya B. Pande, Kanak N. Moharir, Abdelazim Negm, 2023-10-24 This book focuses on the impact of climate change on India addressing environmental problems and conducting an analysis of the climate change impact on mitigation processes It examines crucial factors such as soil capability soil erosion soil salinity and watershed planning as well as the influence of climate change on water resources including groundwater The book explores the interconnections between climate change soil erosion natural resources and agricultural practices emphasizing their direct or indirect effects on water vegetation irrigation planning and the environment Furthermore it delves into various aspects of soil erosion soil compaction soil nutrients aquifers and the impact of climate change on vegetation crops pests moisture and sustainable yield These factors contribute to the development of climate change related factors within the agricultural sector ultimately fostering sustainable development and management practices for the future The book also highlights the significance of parameters such as land use change analysis rainfall water resources crop yield sustainable agricultural development pest management and disease control in accurately assessing the impact of climate change The insights gained from these analyses can inform future development and planning strategies Therefore this book serves as a valuable resource for researchers scientists NGOs and academics interested in understanding the impact of climate change on natural resources and ecological systems

The Humaniverse Guide To Better Reasoning and Decision Making Keith Seland, 2020-01-31 Do you know how thinking about the possibility of extraterrestrial life can help make better decisions in your everyday life The answer to this question will be the first of many that enlighten you and is found in the Introduction to The Humaniverse Guide to Better Reasoning and Decision Making Every person has to reconcile how to solve the many problems that arise daily in their lives These questions are structured like the hypotheses scientists use to enter into their investigations The Humaniverse Guide will immerse the reader by first demystifying the platform of science and show them the tools and methods scientists use to solve their problems answer their hypotheses Then The Humaniverse Guide engages the reader as the research scientist forensic investigator jury and judge in an actual investigation that of the extraterrestrial hypothesis Along its course The Humaniverse Guide will raise their level of knowledge inquiry and critical thinking to help them make sense of their environment in beneficial ways they never were aware of before The reader will own these new tools and larger skill set This can later help in applications to their own life situations and to make successful decisions With these themes The Humaniverse is situated for a global audience What sets The Humaniverse apart from other recent titles such as Ancient Alien Ancestors by Will Hart Timothy Good s Earth An Alien Enterprise Forbidden Science From Ancient Technologies to Free Energy as edited by J Douglas Kenyon and John B Alexander s UFOs Myths Conspiracies and Realities is that the reader will acquire an acute awareness of the history of science learn its methods then use their new tool sets the same way scientists do That user will also analyze a more extensive and pragmatic set of raw data and evidence facts

observed and collected from millions of witnesses from all walks of life throughout recorded human history This is offered to help bridge the gaps in understanding and comfort level that currently exist among the general public and both the science communities and the extraterrestrial hypothesis The abundant utilities the reader user can obtain from The Humaniverse Guide help make those everyday decisions easier to obtain and better

Effective writing in English Mike Hannay,J. Lachlan Mackenzie,Herman Wekker,2013-11-11 We learn to speak and understand our native language without any great effort for these are natural aspects of the maturation of every human being The skills of reading and writing by contrast have to be learned usually in an educational context Now when it comes to a foreign language all the skills speaking understanding reading and writing have to be learned nothing can be acquired without considerable effort This learning process does not take place in a vacuum it is heavily influenced by our previous experience of acquiring our native language and learning to read and write it These facts have been taken as the background to this book We aim this book at native speakers of Dutch who have learned to read and write their own language and who now wish to add skill in writing English to their repertoire Since this is our well defined target group we will be continually pointing to those aspects of written English which differ from comparable aspects of written Dutch while also giving a complete guide to the writing process There are two matters concerning the presentation of information in this book that require clarification in advance Firstly the book contains hundreds of numbered examples

Chinese Governance and Transformation Towards Carbon Neutrality Binlei Gong,Sujian Guo,Jun Xu,Channing Arndt,2025-01-02 This book provides the first comprehensive and systematic account of the multi level governance system adopted by China in realizing the Dual Carbon transition This governance system encompasses the participation of the government the market industry and all sectors of society and emphasizes coordination and cooperation between all levels of government between different sectors and between domestic and international levels The book finds that the government can play an important leadership and guidance role in the Dual Carbon transition By formulating and implementing relevant policies regulations and planning the government can promote the process of Dual Carbon development Second the full utilization of market mechanisms also plays a key role Through measures such as establishing a carbon market and promoting carbon pricing the market mechanism promotes the innovation and application of low carbon technologies In addition the active participation of industry is an indispensable factor in realizing a Dual Carbon transition Industry and agriculture have contributed to Dual Carbon development by promoting the efficient use of resources and the adoption of green production methods Finally raising public awareness and participation in environmental protection is also indispensable and the process of Dual Carbon transition is effectively promoted through publicity and education social organizations and public participation By addressing multiple themes this book provides a comprehensive understanding and in depth analysis of the Dual Carbon transition and offers scientific guidance and policy recommendations for China's sustainable development and the achievement of Dual Carbon goals At the same time the significance of this book

Climatology versus Pseudoscience Dana Nuccitelli, 2015-03-03 This book explains the science of climate change in plain language and shows that the 2 to 4 percent of climate scientists who are skeptical that humans are the main cause of global warming are a fringe minority and have a well established history of being wrong Although some politicians pundits and members of the public do not believe it global warming predictions by mainstream climate scientists have been remarkably accurate while those made by climate deniers have not And if mainstream global warming predictions continue to prove correct the window of opportunity to prevent a climate catastrophe is quickly closing This book is the first to illustrate the accuracy and inaccuracy of global warming predictions made by mainstream climate scientists and by climate contrarians from the 1970s to the present day Written in simple non technical language that provides an accessible explanation of key climate science concepts the book will appeal to general audiences without previous knowledge about climate science Author Dana Nuccitelli an environmental scientist and risk assessor discusses some key climate discoveries dating back to the 19th century and debunks myths such as the idea that climate scientists and climate models have grossly over predicted global warming He addresses recent findings of a 97 percent consensus in the peer reviewed scientific literature that humans are causing global warming a nearly unanimous agreement that formed in the early 1990s and has grown through the present day Nuccitelli also discusses what the future climate might look like if current trends continue unabated and what we as a global society need to do to prevent a climate catastrophe
