Fdez-Riverola, Mohd Saberi Mohamad, Roberto Casado-Vara, 2020-07-22 This book highlights the latest research on practical applications of computational biology and bioinformatics and addresses emerging experimental and sequencing techniques that are posing new challenges for bioinformatics and computational biology. Successfully applying these techniques calls for new algorithms and approaches from fields such as statistics, data mining, machine learning, optimization, computer science, and artificial intelligence. In response to these challenges, we have seen the rise of a new generation of interdisciplinary scientists with a strong background in the biological and computational sciences. These proceedings include 21 papers covering many different subfields of bioinformatics and computational biology. Focusing on interdisciplinary applications that combine e.g. bioinformatics, chemoinformatics, and system biology, they are intended to promote the collaboration of scientists from different research groups and with different backgrounds: computer scientists, mathematicians, biologists, to reach breakthrough solutions and overcome the challenges outlined above. *Sirtuins in Biology and Disease* Tiago F.

Outeiro, Aleksey G. Kazantsev, Sirtuins comprise a family of NAD-dependent enzymes that have been shown to impact longevity in a number of eukaryotic organisms. Sir2, Silent Information Regulator 2, was the first sirtuin protein discovered. The discovery that Sir2 requires NAD for its activity suggested a link between Sir2 activity and the phenomenon of caloric restriction in prolonging longevity. This link was strengthened by the observation that lifespan extension by caloric restriction requires Sir2 protein. Under conditions of caloric restriction, NAD levels are high, Sir2 is activated, and the rate of aging is decreased. These effects have been replicated in invertebrate organisms where a close structural and functional homologue of Sir2 was found in *C. elegans* and *Drosophila*. The sirtuin-dependent effects on metabolism and ageing observed in lower organisms have ignited intensive investigation of their biological and therapeutic roles in mammals. There are seven known mammalian sirtuins, SIRT1-7, the most studied of which is SIRT1, a close structural and functional homologue of yeast Sir2. Enhancement of organismal longevity and other health-promoting effects of mammalian SIRT1 have frequently been attributed to the regulation of metabolism. A recognized molecular link between metabolism and aging stimulated a firestorm of investigations aiming to combat metabolic and age-dependent human diseases. It has become clear, however, that the sirtuin family of proteins regulates a diverse repertoire of cellular functions in mammals. Mounting evidence implicating SIRT1 in important clinical indications such as diabetes, cancer, cardiovascular dysfunction, and neurodegenerative disease suggests that modality as an attractive therapeutic target. Subsequently, drug discovery and development targeting sirtuin activation has been intensified in the recent years. Despite rapid progress and accumulation of new data, the biological roles of other mammalian sirtuins have been less studied and remain poorly understood. There are several important questions that remain to be addressed: What are the functions of sirtuins in different cell types and tissues? Are all sirtuins involved in the regulation of metabolism and aging? What is the functional relationship between different sirtuins? What are the mechanisms of regulation of sirtuin activities? What is the role of sirtuins in disease and therapy? This issue aims to address these and other

critical questions relevant to Research Topic on sirtuin biology and therapeutics To that end the issue solicits expert opinions of sirtuin research on structural biology biochemistry cell biology animal genetics pharmacology medicinal chemistry and drug discovery and on areas of investigation studying human conditions like diabetes cancer cardio vascular and neurodegeneration Of particular interest are the new methods and assays to study sirtuins in various organisms and developing sirtuin based therapeutics Furthermore we propose to encourage contributors to discuss new concepts and paradigms and to express their perspectives on the future development of the sirtuin research field Altogether we believe this issue provides a unique opportunity for comprehensive and diverse coverage of the topic and will be of broad interest for the journal s readership

Macrophages: Biology and Role in the Pathology of Diseases
Subhra K. Biswas,Alberto Mantovani,2014-11-12 Macrophages are a key component of the innate immune system and play an integral role in host defense and homeostasis On one hand these cells contribute to host defence by triggering inflammation displaying microbicidal tumoricidal properties regulating the activation of adaptive immunity and promoting resolution of inflammation On the other hand they contribute to essential trophic functions such as neural patterning bone morphogenesis and ductal branching in mammary glands Thus macrophages are extremely versatile cells that can respond efficiently to tissue micro environmental cues by polarizing to distinct phenotypes depending on the functions they need to perform Indeed functional diversity and plasticity are hallmarks of these cells Macrophages may also play a detrimental role An overwhelming body of literature has indicated their crucial role in pathogenesis The list includes sepsis cancer metabolic

syndrome immunodeficiency auto immune disease virtually impacting every major pathology that we know These observations have suggested macrophages and their related molecules as potential targets in therapeutic applications Available evidence proclaims macrophages as a key player in homeostasis host defense and disease Crucial developments in the past few years call for a re evaluation and update of our understanding of macrophages The present book is an endeavour that attempts provide state of the art knowledge of these cells in health and disease Class 10 Biology Questions and Answers PDF Arshad Iqbal, The Class 10 Biology Quiz Questions and Answers PDF Grade 10 Biology Competitive Exam Questions Chapter 1 10 Practice Tests Class 10 Biology Textbook Questions for Beginners includes revision guide for problem solving with hundreds of solved questions Class 10 Biology Questions and Answers PDF book covers basic concepts analytical and practical assessment tests Class 10 Biology Quiz PDF book helps to practice test questions from exam prep notes The Grade 10 Biology Quiz Questions and Answers PDF eBook includes revision guide with verbal quantitative and analytical past papers solved tests Class 10 Biology Questions and Answers PDF Free download chapter 1 a book covers solved common questions and answers on chapters Biotechnology coordination and control gaseous exchange homeostasis inheritance internal environment maintenance man and environment pharmacology reproduction support and movement tests for school and college revision guide Biology Interview Questions and Answers PDF Download free eBook s sample covers beginner s solved questions textbook s study notes to practice online tests The Class 10 Biology Interview Questions Chapter 1 10 PDF book includes high school question papers to review practice tests for exams Class 10 Biology Practice Tests a textbook s revision guide with chapters tests for NEET MCAT MDCAT SAT ACT competitive exam 10th Grade Biology Questions Bank Chapter 1 10 PDF book covers problem solving exam tests from biology textbook and practical eBook chapter wise as Chapter 1 Biotechnology Questions Chapter 2 Coordination and Control Questions Chapter 3 Gaseous Exchange Questions Chapter 4 Homeostasis Questions Chapter 5 Inheritance Questions Chapter 6 Internal Environment Maintenance Questions Chapter 7 Man and Environment Questions Chapter 8 Pharmacology Questions Chapter 9 Reproduction Questions Chapter 10 Support and Movement Questions The Biotechnology Quiz Questions PDF e Book Chapter 1 interview questions and answers on Introduction to biotechnology genetic engineering alcoholic fermentation fermentation carbohydrate fermentation fermentation and applications fermenters lactic acid fermentation lungs and single cell protein The Coordination and Control Quiz Questions PDF e Book Chapter 2 interview questions and answers on Coordination types of coordination anatomy autonomic nervous system central nervous system disorders of nervous system endocrine glands endocrine system endocrine system disorders endocrinology glucose level human body parts and structure human brain human ear human nervous system human physiology human receptors life sciences nervous coordination nervous system function nervous system parts and functions neurons neuroscience peripheral nervous system receptors in humans spinal cord what is nervous system and zoology The Gaseous Exchange Quiz Questions PDF e Book Chapter 3 interview questions
