

21.12 Turn the drivebelt tensioner backplate anti-clockwise and slip the belt off the pulleys – 2.0 and 2.2 litre engines

2.0 and 2.2 litre engines

12 Using a suitable spanner or socket fitted to the special hexagonal section on the tensioner pulley backplate, lever the tensioner anti-clockwise away from the belt until there is sufficient slack to enable the belt to be slipped off the pulleys (see illustration). Carefully release the tensioner pulley until it is against its stop then remove the belt from the vehicle.

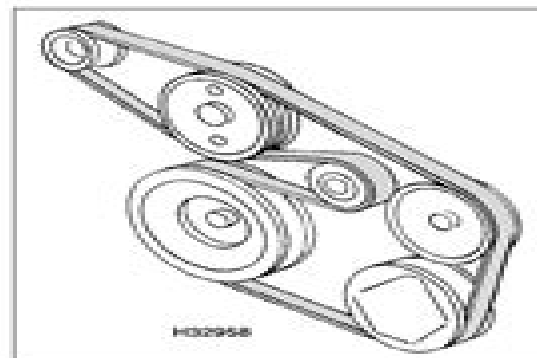

13 Locate the new drivebelt on the pulleys in the correct routing (see illustrations). If the drivebelt is being re-used, make sure it is fitted the correct way around.

21.13a Auxiliary drivebelt configuration on models without air conditioning ...

14 Lever the tensioner roller back against spring tension, and seat the belt on the pulleys. Ensure the belt is centrally located on all pulleys then slowly release the tensioner pulley until the belt is correctly tensioned.

15 Refit the air cleaner housing (if removed), then refit the engine undertray and roadwheel, and lower the vehicle to the ground.

21.13b ... and on models with air conditioning – 2.0 and 2.2 litre engines

22 Valve clearance check and adjustment – 1.9 litre Z19DT engines

Refer to the procedures contained in Chapter 2C.

Every 2 years, regardless of mileage

23 Remote control battery renewal

- 1 Using a screwdriver, prise the battery cover from the ignition key fob (see illustrations).
- 2 Note how the circular battery is fitted, then carefully remove it from the contacts.
- 3 Fit the new battery (type CR 20 32) and refit the cover making sure that it clips fully onto the base.
- 4 After changing the battery, lock and unlock the driver's door with the key in the lock to synchronise the remote control unit.

23.1a Prise off the battery cover ...

24 Hydraulic fluid renewal

Warning: Hydraulic fluid can harm your eyes and damage painted surfaces, so use extreme caution when handling and pouring it. Do not use fluid that has been standing open for some time, as it absorbs moisture from the air. Excess moisture can cause a dangerous loss of braking effectiveness.

Note: The brake and clutch hydraulic systems share a common reservoir.

23.1b ... and remove the circular battery

1 The procedure is similar to that for the bleeding of the hydraulic system as described in Chapters 9 (brake) and 6 (clutch).

2 Working as described in Chapter 9, open the first bleed screw in the sequence, and pump the brake pedal gently until nearly all the old fluid has been emptied from the master cylinder reservoir. Top-up to the MAX level with new fluid, and continue pumping until only the new fluid remains in the reservoir, and new fluid can be seen emerging from the bleed screw. Tighten the screw, and top the reservoir level up to the MAX level line.

Old hydraulic fluid is invariably much darker in colour than the new, making it easy to distinguish the two.

3 Work through all the remaining bleed screws in the sequence until new fluid can be seen at all of them. Be careful to keep the master cylinder reservoir topped-up to above the MIN level at all times, or air may enter the system and greatly increase the length of the task.

4 Bleed the fluid from the clutch hydraulic system as described in Chapter 6.

5 When the operation is complete, check that all bleed screws are securely tightened, and that their dust caps are refitted. Wash off all
