Kindergarten - Math Comments

1. _____ is still unable to count beyond 20. As that is a primary standard, we will need to work with your child more closely to ensure that he/she masters these skills. You can help him/her to master this skill by incorporating math into your playtime at home, and have him/her count larger quantities of fun items such as small snack foods or cards.
2. Your child is confusing the terms "beside", "between", and "below". You can help him/her to understand this concept using stuffed toys, and placing them according to the positional word that you want to demonstrate. Books that focus on position could also be helpful.
3. _____ is showing great progress in math. He/she is starting to understand time related terminology, and is finally able to really tell time! Way to go!
4. He/she finds it hard to differentiate between a circle and a triangle. Have your child identify shapes in your travels and play shape drawing and counting games that focus on those two shapes. We should see improvement with practice.

Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

Children's

Reading and Mathematics Achievement in Kindergarten and First Grade Kristin Denton, Kristin Denton Flanagan, Jerry West, 2002 This report is the third in a series based on findings about young children's early experiences with school from the Early Childhood Longitudinal Study Kindergarten Class of 1998-99 ECLS-K Sponsored by the U.S. Department of Education National Center for Education Statistics the ECLS-K study selected a nationally representative sample of kindergartners in the fall of 1998 and is following these children through the spring of their fifth grade year The study collects information directly from the children, their families, teachers, and schools This report looks at children's school performance during first grade in terms of their reading and mathematical knowledge and skills by relating them to child, family, and school characteristics The report finds that some of the differences in children's reading and mathematics knowledge and skills by child, family, and school characteristics that are present as they enter kindergarten persist into the spring of their kindergarten and spring of their first grade year For example, poor children consistently score below the national average in both reading and mathematics across the kindergarten year and into the spring of first grade These findings also suggest differences that are beginning to emerge by children's sex By spring of first grade, females are more likely to be reading understanding words in context, whereas males are more likely to be proficient at advanced mathematics multiplication and division However, some differences do seem to wane For example, in both reading and mathematics, Hispanic children's scores tend to move upward toward the national mean over these two school years The longitudinal nature of the ECLS-K will enable researchers to track these differences in terms of children's third and fifth grade reading and mathematics performance The report also notes that children who bring certain knowledge and skills with them to kindergarten are likely to be at an advantage in classroom learning compared to peers who do not possess such resources The descriptive analyses of the report show that children who have specific cognitive knowledge and skills are read to frequently possess positive approaches to learning and enjoy very good or excellent general health perform better in reading and mathematics than those without these resources Includes data and standard error tables Appended is a table of regression coefficients for the relationship between children's resources and skills to their spring kindergarten and spring first grade reading performance Contains 18 references HTH
